Thread: [How do you hack a persons Instagram account?](#)

moonshine - February 21, 2020, 3:27 am

^^^^ super curious

I will take anything, I am super new to this and I can't find anything that will actually help me

Fearplay - February 21, 2020, 10:48 am

Hello did you find answer? Bcs I am new too. And i want to know this too. Thank you for help.

passCODE - February 21, 2020, 10:49 am

I send them a message like: "I'm John, I'm an Instagram technician and I need to look into your account, it seems like there's a problem with it. Can you please give me your password so I can check."

And they just send it to me in 83.7% of the cases.

And they just send it to me in 83.7% of the cases.

How do you send it to them, do you make a account on instagram or what?

monster_mash - February 21, 2020, 9:21 pm

Spear fishing, look it up.

NiceGuy - February 28, 2020, 10:37 am

TIP.s

1. get a android rat or multi os mobile rat. setup it , fud it ready
2. exploit it to jpeg or any similar extensions or bind it to an app
3. use sms sending service to send this to the user phone number or use the exploited jpeg file send to them as message on instagram

if they view your message picture, they get infected. you control their mobile device. you can log out their instagram forcing them to sign in again. on this process your mobile rat keylogger will record the keystrokes all victim typed and you will get the login details
also able to do a lot more with victims mobile device.

this are the steps i took to hack Instagram, Facebook, whatsapp etc and since it cost money is the reason i charge for it.

MYST1C_H04X - March 3, 2020, 7:33 am

You could try phishing the account, you could try to get physical access to a device that has the password saved on a browser and then pull the password off of a browser, or you could key log the person's computer to see what they send when they're logging in.
