Thread: [Bypasse Cloudflare DDos protection](#)

Dudule100 - February 22, 2020, 5:46 am

Hello,

Someone have a script to get ip behing the CF protection ? Or directly a script to attack a server protected by CF ? I have down a server from 2 days but the server install CF protect. So i need that.

Thx a lot

(sorry for my english i'm french)

Try using a free cloudflare resolver to see if cloudflare is enabled on all the subdomains, I recommend Shadow Crypt. Do a google search for shadowcrypt cloudflare resolver and it should be the first link, then type in the domain name and try your luck and maybe one of the subdomains wont have cloudflare enabled and you can ddos from there. Bonne journée friend

Would be a shame if someone put on a subdomain that just points to some random Google-owned IP... Have fun taking Google down while not scratching the actual site lol
