Hi friends!

Aspiring to be a penetration tester or just want to kick start your plunge into the security realm? I'm here to offer 100% guidance to pass the OSCP and the OSWE exams. Exam machine solutions, lab solutions, assistance during the exam, maybe just advice and a game plan to pass the exam yourself, or whatever you may need, I'll give it to you. For just \$300 BTC I'll guarantee you pass the OSCP or the OSWE.

For the sake of context and to signal legitimacy and instill confidence in anyone interested, here's a bit about myself:

I'm OSCP, OSWE, and OSCE certified. I have other certifications (like some from the growing ElearnSecurity) but Offensive Security's are by far the most valuable. Currently I'm working as a security engineer and I've been doing penetration testing for about 5 years; from whitebox/blackbox web applications, static source code analysis and dynamic testing, to network engagements neck deep in AD forests, I've done it all. I have a decent amount of experience so I'd love to give back, teach, and collect a few extra bucks in the process. While I do have the wonderful OSCE, I'm not confident enough to guarantee I can carry somebody else across the finish line for that exam.

Interested? Shoot me a PM! Thanks.
