Hello, i have problems with your software.

I'll try to describe what i do.

I installed software on my virtualmachine with windows 10. Windows don't detected any problems with malicious software but don't send me any logs on my email. So i thought that software not work but when i make software with disabled cmd - CMD didn't work.

So probably im doing something wrong when im configurating my mail or something.

When i turn on again my machine Windows Defender find malicious software. :/

It will be great if u make videotutorial HOW TO FIRST TIME with hookspy.com :)

[Stub Update]Updated whole installation process, if there's already same filename in the target path, it will fail and won't run. This issue has been fixed and method was improved. It also include the message box not showing if file installation is disabled, now you can have message box even you disable the file installation.

Bug on empty clipboard causing the delivery to fail. This issue is now fixed.

Send notification can now be used with ftp delivery.

Recovery has been updated, all browser's latest version is now supported including Google Chrome, Firefox, etc.

Note:

This update is to only address known bug reported by our customer. May update are still in the progress.

Thanks for the support.

So far so good. Bought 1 month for now but it does the job done. You will get all logs on your desired website or e-mail as you set it up. It works like a charm. Tho it is better to combine with crypted file service also from Tom C, he will crypt you file from hookspy individually and it will last longer than whole crypter for 20\$ a month.
