Thread: [URL link to another URL](#)

Gizmo - March 24, 2009, 9:01 am

Its not really a hacking question, but how can i make a URL to link to another URL

doomster - March 24, 2009, 10:46 am

Do You Mean URL Redirection?..

-spider- - March 24, 2009, 8:03 pm

<http://billstclair.com/html-redirect2.html>

TDS_LeGenD - March 24, 2009, 8:43 pm

www.tinyurl.com

change www.thissite.com to [www.tinyurl.com/\(weird](http://www.tinyurl.com/(weird) code) then you can use the html tags to cover it up.

Example: Change hackforums.net to <http://tinyurl.com/6verjf> then from there make it www.yahoo.com

That will make hackforums.net look like www.yahoo.com

Or you could make a simple html file containing javascript and host it on a free host. The javascript would use the "onload" attribute so that when the person clicks on your free host url it will then redirect them to the desired website. Again you can use the HTML tags to cover it up.

Appearently HF dosnt like tinyurl but the "spam.com" stuff above is tinyurl

GOD DAMMIT!

never mind
