Thread: [DarkTrack Alien RAT](#)

scamoceano - February 26, 2020, 6:02 am

Hello everyone, I'm a newbie and I've installed a vmware for try something with RATS.

I've built a RAT with this tool and I've opened it. The files has been installed in the directory /AppData/Roaming and starts in the background.

But how do I stop it? Because trough the task manager I can't stop it.

Thanks in advice

Asimov - February 26, 2020, 6:33 am

Get rid of the files in appdata

Nassief2018 - March 10, 2020, 6:38 am

Get rid of the files in startup

AMGTech - March 10, 2020, 10:58 am

Why dont you just right click yourself in rat and uninstall?

Claudiu Fabian Nistor - October 9, 2020, 9:23 am

try to disinstall (pannel control>disinstall a program>[the rat program] disinstall

is this supposed to be a joke?

FaKeSD - October 10, 2020, 11:57 am

You cannot uninstall a rat while its running I think. If you installed it onto your own vm or computer you can remove it in the RAT UI.

Right. Common sense you would think.

Did you use Persistent? If use, you can close "notepad.exe" and after remove all folders.

ItalianBoy - November 2, 2020, 7:48 am

1. Uninstall from Command Center of RAT.
2. Scan and Delete with an Antivirus.
3. Delete yourself on AppData or where is installed.
