Can anyone teach me how to memory edit with C# in games like assaultcube with CheatEngine.

I want to learn:find offsets with AssaultCube

memory edit with C#

compile the Trainer into an DLL

Discord: Void#6383

(I am a advanced Beginner)

pls help

You should check out # on YouTube for information on game hacking. They have videos for exactly what you're looking for. They also have a forum you can check out.

If your looking to make hacks full time I suggest C++

If you're still looking for guides:

[Stephen Chapman](#) has great content focused on Cheat Engine. It's not focused on any particular games though. Watch enough of his videos and you should become competent enough to go solo on your hacking adventures.
