Thread: [cmd/unix/reverse_netcat payload not found in UnrealIRCd vulnerability exploit in msf](#)

oshwaish - March 3, 2020, 8:24 am

Hi expert,

I'm a newbie learning hacking. In metasploitable framework (msf) i want to exploit the unrealirc vulnerability on port 6667. after applying "use exploit/unix/irc/unreal_ircd_3281_backdoor" in msf. if i set the payload "set payload cmd/unix/reverse_netcat" i cannot find when i am in the instance of "exploit/unix/irc/unreal_ircd_3281_backdoor"> but if i go back to msf5> and search for the payload "cmd/unix/reverse_netcat" it is there.

How can i get this payload into "exploit/unix/irc/unreal_ircd_3281_backdoor" instance?

Thank you

Are you using metasploitable VM as the target?

https://www.rapid7.com/db/modules/exploit/unix/irc/unreal_ircd_3281_backdoor

How to add exploits to msf

https://medium.com/@pentest_it/how-to-add-a-module-to-metasploit-from-exploit-db-d389c2a33f6d

(Adjust for msf5's directory in /root, also make sure that the directory structure is properly recreated, often you can see it if you look at the source)
