Thread: [what would be the technical terms be as in what would the term be named specifically](#)

Samm Batier - March 4, 2020, 7:37 pm

i am wondering what the terms for certain things specifically such as "connect port handler"

I am having a RAT built by a person and they want specific terms I know what I want I just need to know the terms I will write the terms I want to be made more specific in a list a bit lower down

1. keylogger
2. webcam viewer
3. mouse take over
4. ability to turn in to a botnet
5. screen viewer
6. file system manipulation
7. ability to completely wipe a computer that has the RAT but still keep the RAT
8. access boosting
9. maintaining persistence on the computer so even if they wipe it they cannot get rid of the RAT
10. ability to spread via email
11. making the rat look and act like firmware
12. making the RAT invisible to the user even if they do a deep file search
13. IP spoofing of the master user so it is unknown of their true location and IP
14. make the rat FUD (fully undetectable)
15. DDOS capability
16. remote capability to turn the computer on even when it is not connected to wifi
17. ability to go into BIOS
18. cookie jacking and manipulation
19. firewall control
20. listening through microphone
21. ability to make the slave's computer screen go black and for them to lose control while the master can still see and control the screen and computer
22. ability to make all of the hardware overclock so much that it catches on fire/explodes IE: (having the ram being used so much that it starts to overheat and burn)
23. ability to make the slave get lowered access so they cannot do anything without permission from the admin (the master)
- 24 .add the ability for it to spread via a wifi network

I am asking for the specific terms because I am having this built by a person and they are requesting very specific terms I tried with this list but it was not enough so I have come here to ask for help I am NOT asking for someone to build me one I just need the specific terms any help is appreciated please help if you know any of the terms

11. making the rat look and act like firmware

What?

No, you cant. its that simple. NO is the answer, and most of this crap your attempting to do is

literally github easy.

If you want to be toxic don't do it here and I prefer a answer from someone who has positive popularity you having negative popularity makes you seem untrustworthy

Rep doesn't matter.

Anyways, heres a list of the technical (or at least understandable) terms of the features you listed:

1. Keylogger
2. Remote Webcam
3. Part of Remote Desktop
4. Learn The Difference Between a Botnet And a RAT
5. Remote Desktop
6. File Manager
7. Stupid Feature
8. I have no idea
9. Rootkit
10. E-mail Worm (These are long dead)
11. BIOS Rootkit(?)
12. Ring3 Rootkit
13. VPN (Not a RAT feature)
14. Get a crypter
15. DDoS
16. Not possible; when a computer is off it isn't doing anything. No electricity is being used.
17. BIOS Rootkit(?)
18. Cookie Stealer
19. Use Remote Desktop or Hidden VNC
20. Remote Microphone
21. Different type of Hidden VNC
22. This might've been possible in the 1990's, computer part manufacturers are smarter these days and have measures to prevent things like that from happening.
23. System lock(?)
24. Exploit.

Rep doesn't always never matter. If someone is selling something and they have a ton of -rep saying they are a scammer, then it matters. but just toxic -reppers isnt always worth judging over.
