Thread: [REQUESTING HELP WITH SUBDOMAIN TAKEOVER](#)

hunt975 - March 4, 2020, 9:25 pm

So I have a list of subdomains that I need to check whether it they are active or not so that I can check whether subdomain takeover is possible or not..

How do i do that... ??

web pentesting beginner here.. please help..

I heard nahamsec mention Aquatone for this job.

PHP Code

<?php

<https://github.com/michenriksen/aquatone>

Personally though I don't use it. I tend to skip port scans when I test domains en-masse.

For best results with subdomain enumeration, you can try to feed a wordlist into a host command.

PHP Code

<?php

host <wordlist entry>

And watch out for echoes that show aliases to, for example, GitHub Pages or AWS or whatever.

BigJoe7413 - March 5, 2020, 10:37 am

try <https://hacking.net/subdomain-takeover-scanner/>
