Do you provide a username scraper? like scrape usernames from a post's likes to txt. Also, are there settings for massfollowing?

There is not a username scraper, and there are settings for mass following. you can search by niche, and you can chose to only follow males or only follow females, or automatically follow every user that you have defined in a text file (by line).

LoweredCav - March 11, 2020, 7:12 pm

would you do a vouch copy to a L33T?

It's only \$5 lifetime if you're still considering it.

Ekta123 - March 25, 2020, 9:07 am

Really interested in buying, you should also increase the price [advice]

Also how do you bypass the instagram detection?All other bots are getting detected and accounts are getting suspended.

For protection, I'm using random intervals of time between API calls & purposely only made the software support 1 account at a time (you have to login / logout for other accounts). The reason all these other bots are getting detected is because they're either:

A.) Using 20+ accounts from a single IP address and all making API calls (eg: mass follow) every half a second.

B.) Using mass-messaging features in odd ways & sending too many links or having people manually report your account for spam.

90% of IG bans are due to people reporting you.

For the price, I prefer to keep it cheap. I'm a new seller here on HF and it's an easy way for people to test out the things I make and gain trust for me before I move on to start selling actual complex, expensive software.

jowaywilt - March 27, 2020, 2:17 pm

Highly interested in your tool but worried about getting banned on IG. Got banned once without using any bot by just following, liking alot. Any way of you sharing a video on how your program works ?

There are no videos, but I can for sure make one for the next update. No bans have been reported from using my software.

Allright, wanna buy and test it. PM me please.

Just bought it. Simple and working great so far. Lacks some features and Options for setting Actions per hour, day and 24/7 runability + routine for Massfollow, Massunfollow, Massmessage etc. so you cant run them at once.

For just 5\$ its worth it and hes coming up with some updates soon.

Cheers

Angela White - March 29, 2020, 5:56 pm

This bot just had a major update, remade the entire thing from scratch and added an account creator and a few other tools. Much more stable as well. I now accept BTC. Price is now \$10.

yes you can, you can scrape all users that someone is following / followers to a text list, and then follow each user that's defined in that text list.
