Thread: [How to forge Warzone Client Rat Extension + upload to gmail](#)

iamatruthseeker - March 13, 2020, 7:17 am

I am trying to get my targets to open my rat. However, I can't upload to gmail.

So I usually upload to a file sharing site.

The problem is that the files even for Warzone RAT are still .exe. I'm using a crypter already

CyberStrike - March 13, 2020, 2:14 pm

Spoofing/forging is just that, the header is the same, there are many files which are executable but not with an extension of .exe or .dll, also I will say it that Gmail do a good job and blocking most extensions that can be used to execute code. So two questions:

- 1) What file extensions are blocked by Gmail?
- 2) What extensions are actually able to execute code?
- 3) If I can't send you a file how would I get someone to download it?

These three questions would answer all your questions, the third one you just have to think about the solution can be all your own.

Thanks. I tried using warzone. I crypted it as well but Defender and smartscreen quickly detects it. Not sure what I am doing wrong

Nothing, it's not signed that's an issue. You know knowledge is the counter to all these issues as well as a bit of actual funding. There are also more advanced or less documented methods of malware and injecting in processes, but once again knowledge.

iamatruthseeker - March 13, 2020, 2:43 pm

I've been trying to figure all day what the issue is. Maybe cause it's an .exe file? I crypted it. What does signed mean? Maybewarzone is crap

A little and I mean little Google is dangerous:

<https://support.google.com/mail/answer/6590?hl=en>

(Google: File types blocked in Gmail)

How can you get around gmail well in that link they give actually an idea. Google at their finest, helping with site reputation as well, at least you shouldn't fall into that trap.

Actually interesting that they don't block certain well known malicious filetypes at least don't list them, just search.

Code Signing:

It's all there for the learning, just search.

Have you tried it in a zip?

markferr - March 19, 2020, 5:11 am

Thanks. I tried using warzone. I crypted it as well but Defender and smartscreen quickly detects it. Not sure what I am doing wrong
