Is a SYN-ACK Flooder, this script in 2015-2016 caused a lot of problems to OVH :)

H4x10r - March 18, 2020, 3:09 pm

looks still clean thanks :-)
got some more haha ?

SpackHost - March 18, 2020, 4:09 pm

this is not the greensyn. this is the synack.

GreenSYN is already a synack attack, go read the source code my boy.

Dotexe - March 18, 2020, 4:28 pm

Just upload it on github ?

And yes, is a synack but with different flag and packets, (in fact greensyn have 2 different script, one is called "greensyn" and one is called "synack", same graphics but different precompiled tcp packet). I have all yubina scripts and i know c don't tell me to read code lmao.

Also have yubidev with password, i got the source from yubina and i updated the bypass packet for ovh (still working).

Yubina was my old customer for spoofed server, he had alot of money and he made an ovh bypass in just 10 min in front of me, he was so good from 2010 to 2016 but now he has a son and he don't do those "bullshit" anymore. Rip yubi.
