[b]SpackHost.com (Full Review)

Code I'd like to say before we get started, I'm sorry for the hateful threads, And UNTRUE INFORMATION I have spread-
about Spackhost.com before hand.
So lets get started on the review....

My Goal

I was looking around for a spoofed vps to stress test my game server host. (Trying to see if I could take it down)

My Options

When I first was looking on HF I came across SpackHost.com...

I was skeptical by the price. (Cheapest spoofed VPS hosting provider starting at 15\$! <.<)

All the others I found were

SharkServe.rs (Dedis Only W/ 10tb Bandwidth)

ClientVPS (Spoofed VPS Starting at 50\$...)

Not going to list all the others but a simple google search of...

"IPHM ENABLED VPS" Will result in about 6 other hosts...

My Purchase

I bought the Spackhost for about 20-25\$ with btc fees at the time, and took about 1 day to get the server.

Since then the server was going down every 30 ish minutes for about 3-4 days. (BUT SINCE THEN THEY SWITCHED HOST)

Here is where I made my mistake.

I came onto HF.

I posted untrue information. (You can read my old threads on my profile if you want, but just remember, I was scanning on the server....)

My Output

<https://ibb.co/BcjtcpG>

My Outcome

They serve a purpose.

They are not ripping you off.

I know 5 Web Stressers that strictly use Spackhost... Does that not tell you enough???

and I don't want people to think that they are SCAMMING BECAUSE THEY ARN'T.

Join the spackhost discord and talk to me and a couple other customers to reassure you, I will even

hit a dstat for you :D
