Thread: [Stay safe while hacking?](#)

JohnnyMoney97 - March 24, 2020, 2:00 am

Hey Hackforums.

I just bought the Multihacker for Facebook/Instagram - Obviously I want to stay anonymous when I log into accounts - is there a VPN for both desktop and iPhone that is free and safe? Otherwise what is the cheapest option I got?

gilbert2426 - March 24, 2020, 3:54 pm

It depends on how safe you want to be. VPNs are a dice roll when it comes to whether they keep logs or will start keeping logs at some point. It really depends on how much risk you are willing to accept. If you are okay with moderate risk then a VPN should suffice. But you should evaluate your threat model. If you are going to be performing this activity for a long period of time then you should invest time in your infrastructure. I'm fairly paranoid for a good reason about my OPSEC. for that reason, if I were in your shoes I would do the following.

Use tor and anonymouse/pseudo-anonymous cryptocurrency to purchase a window VPS. access the VPS desktop environment over tor and use that as an environment for running any tools that you've purchased.

Also, I wouldn't use a phone linked to you or your physical location for whatever reason you needed a phone for this tool. I would instead use an android emulator running on the same VPS.

this tool does not work ?

Asterik22 - March 25, 2020, 10:30 am

Any link that commands you to buy a package to hack better is a scam, you were scammed and easy and ugly.

like the others above had said, you likely got your money took. theres no automatic fb account cracker- especially not for any account of your choosing, if one did exist, itd be a major data breach.

good luck,
newportnikka
