Thread: [how to create simple trojan](#)

remix1337 - March 26, 2020, 3:41 pm

Hello, i wanna learn how to make a simple trojan virus. I wanna mention that I am not expert in programming, but i'd say that i am Low-Intermediate level in C#. If anyone is familiar with trojans in C# please PM me or Reply on this post.

Obistone - March 26, 2020, 5:48 pm

"Trojan" is just a term for the way the malware was delivered onto the target machine, you're going to have to be more specific.

HatchetAx - March 27, 2020, 1:53 pm

Why do you want one in C#? Usually C or C++ is used because they are more efficient and have direct access to inner rings
