Thread: [Is it safe to port forward my rat on my network?](#)

GameMR - March 27, 2020, 2:14 pm

Does anyone know if it is safe to port forward my rat on my network, or should I use a port hosting service?

I'm just kind of paranoid that someone will find my ip or some shit.

ItsJigSaw - March 27, 2020, 2:20 pm

Ofcourse it is. Any trace that can lead authorities to u is bad.

Using a hosting isnt safe either, they can and will give info about u to authorities if asked to.

Do you mean it isn't safe to use a rat on my network?

Also, if I can't use a port hosting service, what can I use?

Yes, it isnt safe at all. U can use, but do it from a vpn, try masking your real identity as much as possible.
