Thread: [Do you use a different password on every website you visit?](#)

Condoms - March 27, 2020, 5:12 pm

Some people use different passwords on different websites they visit.

Others, use the same.

What about you?

Pennywise - March 27, 2020, 5:24 pm

Yes I do.

They are stored only in my head. I will never trust a third party app.

Pennywise,

Simplicity! - March 27, 2020, 5:27 pm

Different 128 char passwords for every website. Bitwarden all the way!

Pink Floyd - March 27, 2020, 5:27 pm

I have a set different password I use for various websites,

Pretty much have to reset PW every now & then due to them tangling with each other while logging in.

Trippy Space Cat - March 27, 2020, 5:36 pm

Similar passwords but with slight differences depending on bank, games...

Disease - March 27, 2020, 7:03 pm

Yes, and I use a password manager ([LastPass](#)) to ensure every password is lengthy, complicated, and never has to be typed. If you've ever wondered how LastPass is secure, then I'd recommend you [read this article](#). It explains what would happen if LastPass were ever hacked (and it has been before- without compromising any encrypted data). But that same information is what makes LastPass a better alternative to effectively everything else.

Mr.Nobody - March 27, 2020, 7:05 pm

Same password for everything

AX10M - March 27, 2020, 7:07 pm

Yes i do. I generate and store them with the help of the awesome tool KeePass for linux. I obviously backup my keepass database very often so i dont lose my data.

Most websites won't allow such long passwords.

Pinball - March 27, 2020, 7:48 pm

I keep quite a few passwords I can remember in my head, makes it easier.

Simplicity! - March 27, 2020, 7:51 pm

(Mar 27, 2020 07:28 PM)Geralt Wrote: [\[CITE\]](#) Most websites won't allow such long passwords. True. Well, I use the limit sites accept. Mostly, 128 char. If you've noticed, some that sites that allow 128 char won't let you login after.

Yes I definitely on different passwords :)

You just need to jot down all your passwords for you to have it in times you will be needing them :)

Doing such thing makes your account much more safer :)

Maskin - March 27, 2020, 8:17 pm

Yes and if you want my passwords, I have this piece of paper on my desk. Take it and you have my life.

Luca - March 27, 2020, 8:56 pm

Of course I do I'm not that dumb.

SaintJimmy - March 27, 2020, 9:05 pm

Yes, I do. And I try to keep them memorized in my head by finding a trick or another. I lost try to make sure that they have no meaningful context.

Instagram - March 27, 2020, 9:13 pm

Of course you always have to change up your passwords!

Snowwy - March 27, 2020, 9:29 pm

I have multiple passwords that I use for different websites.

Hey, and how do you manage them?

Got some advice to share? I would like to do that as well!

Social Engineer - March 28, 2020, 12:22 am

There's softwares out there that allow you to do it, that are cross-platform. You have one main account that keeps track of all the passwords and then auto-fills them all.

Renestey - March 28, 2020, 12:41 am

Generally I have a variation of a similar password for every website yes

Xtreme™ - March 28, 2020, 3:17 am

Yes, I do use different passwords for different websites!

The difficulty of it depends on how important the work on the website is!

I don't trust 3rd party Softwares at all, All of the passwords are in my head :)
By bank account and primary Gmail have the most difficult ones which I keep changing!
While all my gaming account has a simple one and shares the same passwords!

Twitch - *March 28, 2020, 3:19 am*

i used password generator for non important accs for the ones i actually need i have quite a few passwords i use.

Net - *March 28, 2020, 3:38 am*

For sites that look a little bit shady I use a different mail and password. Other than that my passwords are pretty similar in a way (same format), but different.
