Looks promising.

I am interested in this

Mass Message (Link) Sender

How many messages per hour or a day I can send.

What language are you using? Does it need a live token?

Many thanks.

That completely depends on how many people you choose to follow, if you have safe mode enabled, and the age of your account. a brand new account might have issues following 200 people in an hour, where an account that's a year old would have better success.

There are no reported bans from using my software and I want to make sure no one gets banned.

You already have a thread. Why post another one?

Angela White - March 30, 2020, 3:16 pm

(Mar 30, 2020 03:11 PM)Luca Wrote: [\[CITE\]](#) You already have a thread. Why post another one?
Because I'm not upgraded so I'm not allowed to edit my post because it was over 24 hours old.

The price of the tool changed, the UI changed, i added more payment methods that I accept, and over 5 features were added, etc. Due to me not being able to edit the other thread to reflect all of this, I just made a new thread. It's easier to do that to have people see the features in the thread instead of hoping they just so happen to see my post on the bottom of page 5 or whatever saying the price of the tool changed.

if you get a phone / email verification, you can do them via my program and still login.

you do not currently need proxies, although it'll be in a future update for people who need them.

Hey mate, really interested!

Just couple of queries, can i target a page's followers?

Like there's this "X" page i want to target followers

So the program follows the users of the 'X' page and then unfollow it later on?

Angela White - April 1, 2020, 7:40 am

Later today I'll either figure out how to tag people in posts & tag you guys in a video demonstrating. Although, I thought it was pretty simple to do, and you guys think it's impossible, so we might not be talking about the same thing / i might have phrased something weird. i'll still post a video of what i'm talking about here in a bit.

Before I waste a whole bunch of time by adding a video, I'm talking about when you try to login to your account and you get the 'challenge_required' flag & have to send a verification code to your phone or your email address on file for the account. You can select which one you want your code sent to (on my program), send the code, and then type in the code you got sent via SMS into the program, and it will validate your session and let you login.

It's been different for people, some people are able to follow 500 people in a short span of time (an hour or two), and some people get stopped after 200. They are just temporary soft-locks though, no actual bans. For account creation, that doesn't impact your personal account so you can just create as many as you want and switch IPs when they put a softlock on your IP for account creations.

Software is now 50% off for the rest of the week, if you have any questions you can PM me. If my product isn't exactly what you need I'm not going to try to trick you into buying it, just ask any

questions and I'll get everything answered / cleared up! :)

(Apr 14, 2020 11:52 AM)funтеля Wrote: [\[CITE\]](#) What I mean is, how many accounts can the bot run at a time?

Only one at a time, but I plan on changing this. I originally wanted this to be a bot for businesses to build up their brand and didn't foresee so many people just wanting to use it to bot accounts. If you want I can send you a PM when I add support for multiple accounts.

I mean you COULD have multiple instances of the bot open all running different accounts, but I'm sure that's not what you're looking for at the moment.

Hello, i would like to know more about the mass following feature of the bot.

I already have a free application on my phone, that mass follows people with a limit of 100 persons each half hour. Meaning after the 100 followings you have to wait 30 minutes in order to follow again.

How is this bot going to help me grow my instagram account on a easier way? Does it automatically follow x ammount of people, every x ammount of time, or do i have to manually click "follow" in order for it to start.

Thanks for more info.

Using a bot always puts a risk on your account, but I put forward extreme measures in my software to protect from bans. The auto-follow bot is a tool that will help a ton with getting people to follow you back after you follow them, and then using our mass unfollow tool to unfollow them right after.

I do plan on making one for Twitter, I have a whole series of products lined up, I'm just working on getting my website set up, auto-buy enabled for all of them, etc and buying Vendor on HF before I start with the other bots.

This bot is getting a lot more sales than I would have imagined and if I have more than one I'm 100% going to need an autobuy system.

I'm planning on making that a separate bot as this one is mostly specific for growing specific accounts & giving them specific instruction.

i plan on making a ton more social media bots as well.

Yes, you use the scraper tool to do obtain a list of people that an account is following, then use the mass follow tool and import that list to follow all of them.

PM me on Discord, I've been sick for the last 2 days and haven't really been on HF or Discord. I have over 50 people message me on Discord daily.

If you are receiving an action block, you are most likely on an IP that has already been flagged by Instagram, especially if you've been having this issue from the start. Only times people have received that issue are when they're trying to run the bot on an RDP or a free VPN like HotSpotShield. What country are you in?

also, when you PM me an update just dropped today. Was finished a couple days ago but I've been on my laptop in bed the last few days.

Account mass following is in the tool and I will be adding back the mass account creator. Looking back on it, not sure why I deleted it in the first place, lol.

Wasn't too hard to make, finishing up a website for an IRL client of mine and after that I'll start working on that update to bring back the account creator :)

Have played with the different features for the last couple of days.

Some of the features could benefit from extra options that can make life easier and the software safer and stronger (like for example adding limits to following / unfollowing)

Regardless, from all the functions i tested everything worked as intended.

If you are doing instagram marketing, don't think twice, even if you use Jarvee or other tools, you will find a use for this bot - And 10\$ is not that hard to justify.

Hello, ive been using this instagram bot for some days (you can check my previous post when i bought it) and its been great so far, i mostly use the scraper/massfollow function, since i work with music artists, so we use the bot the steal followers from other singers, and its been working wonders, my artists are earning 100/200+- followers per day (making it work in a safe way), and they are super happy with it.

So thank you very much, going to be around for updates and other tools (Y)

Totally recommended (also super cheap)

What features did you use? If you used the mass follow tool for more than 150 followers per day you will get that, especially on newer accounts. That message is extremely rare unless you abuse almost every feature the program has to offer in a day.

Not only that, you are running an older version of the program.

99% sure he used a contract and it bugged or something, I have no PM, convo history, or Discord chats with that user and have never contacted them.

No way he would have got my selly link without starting a contract or unless he came from a

different forum and just searched "kasprdev" in google and found my name here

It's currently an automation / growth tool that runs 1 account at a time but has near non-existent ban rates (1 ban out of 6 months of selling) and doesn't require proxies. Also lets you logout / login to other accounts as you please

Yes, but you'd have to select those people from the mass unfollow list until the next update (eta: a few days), it'll let you save a list of all users the mass follow feature followed so you can automatically unfollow them by importing that same list.

2 now, feels bad.

Bot is good, worked okay but I had a few issues, Kaspr solved them and its updated often enough which also solved my issues, after 2ish weeks of use I was perm banned. Most likely bad luck but was a personal second account I was growing so doesn't feel great but thats my fault.

if you keep the limits nothing should happen. it says max 150 follow/unfollow per day, and id say around 10-15 comments max should keep it safe. Im doing around 250 follows/unfollows a day though, sometimes i got action blocked for unfollowing but thats all

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.
