Thread: [Need web developer with experience in field of handling billion lines of data](#)

dalton - March 30, 2020, 8:32 am

Hi.

Looking for someone TRUSTED with experience of handling billion entries of data (storing, loading, query, etc...)

In order to discuss, send me your TELEGRAM in PM. I don't use discord and I wan't to chat in real-time instead of having to PM you every time to get back to you.

Only TRUSTED and EXPERIENCED people, please. If you're not both, don't waste my time aswell as yours. Cheers!

Hi, could you describe the data format that you are looking to store, load, and query?

Is it data that is already in a database like mysql, postgres, sqlite3, mongodb, etc?

Is it in JSON, XML, or a custom format?

I have worked with all of those formats and databases above, so I can do this job for you.

Also, i can use Golang for this job which will give you much better performance than a solution in something like PHP.
