Thread: [Website Vulnerability Scanner](#)

thisisKiller - April 3, 2020, 12:25 am

Can you suggest me best website vulnerability scanner. I want to know vulnerabilities in a website.
Thank you

Hello my friend

If you are a beginner I would recommend acunetix web vulnerability scanner because it has a good user interface and also explanations about the vulnerability and how to fix it !!

You can find a list of all the free and commercial scanners with a description at the link below

Usually the scanner is not able to detect all the site vulnerabilities, some sites have to be manually checked, you should consider things like content management system type, server type, etc, for example if the WordPress site system You need to identify plugins, themes, etc. to find exploits or vulnerabilities and more ...

However, I recommend using Nessus and OpenVAS as well

If no specific results are obtained, you should perform a manual penetration test ?

WpScan for wordpress websites, Nikto for generic sites. Those are the easiest to use. Remember to get the API key for wpscan.
