Thread: [How to find email address associated with a phone number?](#)

rickon443 - April 3, 2020, 5:03 pm

I've got the phone number of a target that's attached to a yahoo account (I'm trying to get into that account/their snapchat etc). I want to learn that yahoo address to search for it in a DB.

I've looked at whitepages and been verified... but nothing. How can I find the email address(es) attached to a number?

Use Sherlock on Kali Linux.

--Download--

git clone <https://github.com/sherlock-project/sherlock>

Read the Usage and Requirements before running it blindly. Hope that helps.
Cheers.
