Thread: [1080p 144hz Gaming build](#)

Truhmp - April 7, 2020, 9:18 pm

Anyone got any good 1080p 144hz builds? I'd say my budget is 1500. Mainly wanna play call of duty at 144+ consistent frames and include a m.2 ssd storage

CyberError - April 7, 2020, 10:37 pm

1500\$ budget is high enough to build a 1440P gaming pc

Are you gonna include any peripherals in this budget ?

ItsJigSaw - April 8, 2020, 6:50 am

RTX 2070 Super and Ryzen 7 3700x is pretty much what u need.(And 16GB ram should be enough)

for gaming only a 3700x is overkill, a 3600 will do the job perfectly

Truhmp - April 8, 2020, 8:38 am

I already have monitor. Keyboard and mouse. Just ready for a new build

???

why would you pay for a cpu that only really offers benefits for people who want to game and stream? for gaming only, a 3600 and a better GPU would obviously be the better choice.

Its a small price difference. Also, its not only gaming and streaming, its pretty much any multitasking. So yeah, if u got the money, no reason to not take it

It's better budgeting to not look at things in a way as "if I have the money I might as well" versus "I have the money, but do I need it?"

Except that its still in his budget. Dont go to other subjects, he wants a build for his budget, he didnt ask us to give him smth as cheap as possible he asked for smth in that price range and i gave him the best cpu

I run a 3600, 1660 ti and 16gb of ram and can run 144hz just fine

(or get the 2070 super)!

SIM-3257834 - April 9, 2020, 6:39 pm

M.2 is a form factor not a storage type, meaning you could get either a M.2 SSD or M.2 NVME. Not that it matters most autistic gamers are fine with SSDs.
