Thread: [Coder for android malware budget \\$250 & Telegram bot budget \\$300](#)

Marketplace - April 9, 2020, 4:00 am

Looking for someone that can code me android malware software for \$250.

Description of what it should do:

There should be a .apk stub that connects the victim to a windows client.

This stub will give me control over the following things: Send texts to a number with a specific message both set in the code (no need to input that in the client).

Uninstall stub on android phone.

There should be a client the following features: A button that sends a message to a phone number, which are both preset in the stub code (to maximize run speed)

A counter of amount of installs.

A button to uninstall all stubs.

T.O.S.

1. I want to see the program working before I pay you. This means you can have the client on your computer, and we install the sub to my phone and I give you a number to test text it to, uninstall the stub and see if the counter works.
2. You should be able to offer support and/or changes to the program for one month afterwards.
3. Payment is in BTC only.
4. Deals should be on discord only in case I have to file a deal dispute. My discord is Yontox#9517 (Please only add if you agree to the T.O.S.)
5. I want this coding done on the 23th of april or after, I can't pay before that.
6. You get an extra 1000 bytes on top of the payment. ?

Looking for someone who can code me a telegram bot for \$300 or less.

Description of what it would do: This program will run on the webclient of telegram, found at

<https://web.telegram.org/>

It should try to add contacts from 1-100, call them by a name 1-x. x Being the amount of users it can find ascending from 1 to the last user.

It should send a message to every contact in 1-100 to everyone who has a telegram account

The program should have a message set in the code, not put in a GUI

Then delete contacts 1-100

Add contacts 101-200

And repeat the previous steps

It should use a phone number I make an account on, and if it gets banned the program should be able to continue on where it left of with the previous phone number. This is very important. All new numbers, when the old ones are banned, should be manually verificated by autofications.

Note: let's call 06-000-00-000 to 06-000-00-100: 0-100, to make it easier

So 06-000-00-200 will be called 200

etc.

[/color]

Let me know how much messages/hour you think you can send with your bot so you can get da money ??

T.O.S.

1. I want to see the program working before I pay you. This means I want to test the bot on your computer, where it send messages till the phone number gets blocked, and you should be able to verify a new phone number and see if it takes off where it stranded and got banned.

2. You should be able to offer support and/or changes to the program for one month afterwards.

3. Payment is in BTC only.

4. Deals should be on discord only in case I have to file a deal dispute. My discord is Yontox#9517 (Please only add if you agree to the T.O.S.)

5. I want this coding done on the 23th of april or after, I can't pay before that.

6. You get an extra 1000 bytes on top of this payment. ?

I got somebody for the telegram bot working on it rn

????????????Michael Kors - April 9, 2020, 1:09 pm

I really doubt anyone would start working without half of the payment upfront.

I done this with people already and it works so

+ Talking to somebody right now.

With that budget and payment terms, best you could get it a meterpreter .apk generated with FatRat or similiar.

Some0ne.big - April 11, 2020, 6:05 am

300 for the telegram bot is more or less reasonable.

250 for private android solution, which i think you want FUD, and working on all android versions is like trying to buy new S-class mercedes for the price of a used prius.

You can easily buy a ready solution for less then 250 or use a open-source free solution.

No offense - but offers like this is a insult to developers.

I'm ready to provide a android solution, a private android solution - 1500 usd, thats without the source code and MM is a must, before i even move my mouse - and thats the way it should be always. Stop underpricing.

This man knows it. 250 for custom is way too low.

It is, I already have 3 people interested in coding this for me so the price range seems alright.

Stop your LQ nonsense on my threads. Any further replies will be reported.

I second that. I'm getting tired of people wanting to hack Nasa for \$25.

Lrrr - April 12, 2020, 11:11 am

I am interested in speaking to you about the Telegram bot. I'll add you on discord.

As for the Android rat, you are very under budget as others have stated.

do NOT do business with this SomeOne.big. See my dispute with him

<https://hackforums.net/showthread.php?tid=6061249>

these sites are full of scammers, and contracts are shit, and mods don't do nothing

I believe that staff do not get involved in deal disputes.

There's already some interest in it. Thanks
Also for the android rat, which is barely a rat..
