Thread: [Bitcoin Whale numbers hit 2 YEAR HIGH?!](#)

jfm-8 - April 10, 2020, 11:09 pm

Read this Article the coin telegraph that is very interesting and bullish for bitcoin!

I think this means whales are accumulating at these prices in before the halving which is in approx 32 days!

"There are more Bitcoin (BTC) whales now than at any point in the past two years — and that mimics a trend from its 2016 halving, data shows.

In its latest Week On-Chain report on April 9, monitoring resource Glassnode revealed that current numbers of major Bitcoin investors are extremely similar to early 2016."

Exciting times ahead cheers for sharing! I can feel the stigma in the air it will run once again in 2020!!!

humanbody - April 11, 2020, 12:03 am

I wrote in your other "Bitcoin halving thread" with information from glassnode article.

But this is nothing new. Since 2019 people aka whales start accumulating BTC and that's a nice looking trend. And this trend in terms of accumulating BTC always happens before halving as we can see on this chart below.
