Thread: [how to encode Browser password recovery tool \(c#\)](#)

mayar2020 - April 12, 2020, 1:19 am

Hello everyone

i want to ask how to encode Browser password recovery tool (c#)..
as i can see all Chrome , Firefox stored passwords
i want the idea of making this application.
thanks

Have you learn the basics of c#?? for google chrome, the account is saved in Code Username\AppData\Local\Google\Chrome\User Data\Default>LoginData. you need to read this database, and read this columns origin_url (website), username_value (username/id/email), and password_value (password).

thanks very much..

i reach the login data file and download it ..

i open it and i find it contains (characters and numbers),

how can i read username and pass from this file(login data)?

thanks in advance

Search for any sqlite database reader.

mayar2020 - April 12, 2020, 4:32 am

i use "SQLite File Viewer"

but it shows usernames only, i cannot find the password.
how can i show password?
thanks in advance
