Thread: [how can I find vulnerable websites without dorks](#)

JavaZeusiii - April 13, 2020, 12:38 pm

Hello,how can I find vulnerable websites (I have tried dorks so far but have not had any success with it).

Hello my friend

Dorks are only for finding target vulnerabilities that you want

You must first determine :
you are looking for a target?
or a Have an specific target?

If you are looking for a target, use dorks

If you have a specific target, follow the instructions I gave you in another topic:

Quote:You should first have a study on penetration testing by searching the HF forum

One of the easiest ways to find vulnerabilities on sites is to use scanners, such as Acunetix, OpenVAS, Nessus, and more.

Of course, the desired result is not always achieved

If you don't get the desired result, you have to do an penetration testing manually, which includes things like server identification, information retrieval, and CMS review, and so on....

Do you have any virtual pen-testing labs setup? This can be things like kali or parrot for instance.
