Thread: [\[TUTORIAL\] Raising sniffer for XSS vulnerabilities](#)

Central Sky - April 15, 2020, 1:41 am

In this article I will tell you how to raise a sniffer for introducing vulnerability in XSS with the subsequent hijacking of cookies.

The sniffer that I wrote sends a log to Telegram which, as for me, is quite convenient.

The log from the sniffer has the following form:

IP - 185.250.207.58

Country - Netherlands

City - Dronten

Test site

Date - 04/09/2020 21:25:39

User Agent - Mozilla/5.0 (Windows NT 6.3; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko)

Chrome/80.0.3987.163 Safari/537.36

Referer -

Cookies - test=cooookie; test2=cooke2;

In order to install the sniffer, simply upload the notify.php file to your hosting.

Also on GitHub I added the Sniffer.php file. This is an example of using a sniffer (You can simply rename, add a bot token and your Telegram ID)

Implementation example:

<https://pastebin.com/vdXXyeiu>
