Thread: [Cash app autobuy with email fetching & API?](#)

James Burnham - April 15, 2020, 8:07 am

After reading that thread <https://hackforums.net/showthread.php?tid=6067056>

I decided that I am interested to include cash app as a payment method in a site.

As you can read in this thread, there is a site that has an autobuy cash app method

<https://clucknorris.coupons/>

The question I have, is how can I create something similar?

Juffar said that "it can be done by fetching info from the email that Cash App sends when you receive money."

But how would I go about putting all these things together?

Is there any already made public or paid script that I can use as a base?

Look at <https://www.cloudmailin.com/>

You can forward a copy of all emails from cashapp to that and process in PHP or python easily.

Thank you, that looks pretty useful.

With some basic PHP you should be able to make it work.
