Xanadium - April 15, 2020, 12:14 pm

So what is this just a RAT? How do the delivery methods work?

M00nD3v - April 15, 2020, 12:22 pm

(Apr 15, 2020 12:14 PM)Xanadium Wrote: [\[CITE\]](#) So what is this just a RAT? How do the delivery methods work?

No its not RAT. Its a keylogger and has currently 03 methods of delivery i.e Email, FTP and Proxy (This works like a email forwarder) you can use your gmail account and your account won't ban by gmail. We also working on Web-Panel. Feel free to ask any question

Regards
M00nD3v

So how is it spread? Is it executed on email open or does it put out a stub exe to use?

M00nD3v - April 15, 2020, 6:23 pm

You need doc exploit for this.

Quen - April 15, 2020, 6:35 pm

Good luck with sales. its looks good.
