Thread: [beautiful soup catch this](#)

SIM-1866423 - April 16, 2020, 3:57 pm

After many years first time i need help on scraping my brain unfunctional right now ?

```
Code <body contenteditable="true" dir="ltr" class="">
```

```
<div>text text</div>
<div>text text</div>
<div>text text</div>
<div>text text</div>
<div>text text</div>
```

```
</body>
```

How can i get inside text from this.

If you're trying to get the "SOMETHING SOMETHING SOMETHING" text (clarify please):

```
Code from bs4 import BeautifulSoup
soup = BeautifulSoup(html_doc, 'html.parser')

result = soup.find('body')
```

yeap sorry you are right i just update question, all div tags.
```

Updated:

```
Code from bs4 import BeautifulSoup
soup = BeautifulSoup(html)

for div in soup.find_all("div"):
    print("content: {}".format(div.text))
```

Could you elaborate?

You're trying to select all div tags in the body that have what feature?

I have literally 0 idea how this ambiguous but fine. You just need the text from each div? You said that outside of the body there are div tags, and you want to ignore them, but the screenshot you provided (in OP) has no divs outside of the body.

1. All divs in the screenshot are IN THE BODY
2. The code provided earlier pulls the text from inside each div

Again, I'm not seeing an issue.
