Thread: [Updated Jailbreak & iCloud bypass info](#)

xAlimorAx - April 19, 2020, 7:15 am

If i take the time to update the methods and write some tutorials here will it be a waste of time? Are there people actually looking for this info?

If i can see at least some demand for this material, i will start working on something ASAP

sript3xploits - April 19, 2020, 5:47 pm

Yes, id actually like this

NuclearLenny - April 19, 2020, 8:10 pm

-just copied my comment from another thread so here yeah go, these are my findings.

So... I have been searching for tools that apparently works... with a particular method involving Checkra1n's recovery mode and some other attempts for methods to achieve iCloud Unlocks for IOS devices. As far as I know.. I have not tried them yet and I assume by default they work with any IOS Version, on any IOS device with any IOS device chip (if that is even a factor)

Site 1:

h <https://forum.iphonecake.com/>

I don't have a second link because it only works when you make an account so just go on the search bar on their site, make sure it searching on "forum" filter and search " Tenorshare 4uKey Pro 2.1.4.8 for PC "

On site number 1 they have cracked IOS and mac osx tools, programs and what not. (very known in the Jailbreak/Cydia community), Let me say.. this place is legit, I got parallels 15 from them for free and working, installed windows 10 (no i didn't activate windows, just installed the .iso) and with the newer downloads such as the "business edition" you get 1-2 annoying "You might be a victim is counterfeit software" yada yada, its like 2 pop ups max, just throw them in a corner and you can forget about them don't even bother clicking the (X) and close out because they just come back 5 minutes later.. unfortunately I'm not smart enough to end the spam..Just get the previous version, does the same thing and annoys less. I know this because I thought updating was a good idea. ANYWAY..

Now that i'm done wasting your time with some a stupid personal story.. the result of searching " Tenorshare 4uKey Pro 2.1.4.8 for PC " is where I got my first tool which is currently on my virtual PC. This is because none of the mac osx links worked and only the PC ones worked for some reason. There is a couple Tenorshare 4uKey Pro links but I don't remember which link worked but it's one of the pc ones. Just search what I mentioned. You should be able to find it.

Site 2:

h <https://myicloud.info/download-icloudbypassca/>

More specific link:

h <https://myicloud.info/download-icloudbypassca/>

Striving to find an alternative for mac osx I actually did end up on a different site come across a tool that also does iCloud unlocks called " iCloudBypassCA "

The download worked even though I am like the last guy to download anything with a website that looks like this. These sites always have cracked software waiting to be downloaded but guess they really pulled through that day. I also have not tried it but the link should work, they even show you how to use it as part of the program. (i would set the phone on recovery mode to be honest before using both tools, just in case if it makes it any easier for the programs to do their jobs.) (side note- the second tool does require you to use Checkra1n so.. I posted a link to the jailbreaking tool) (2nd side note- I read some comments about not being able to use data and calls after these methods, Hopefully that doesn't come to be true but, try and see what happens. :)

Jailbreak tool site: <https://checkra.in/>

Enjoy and tell us what the results are.

(i cant post links quite yet just put the 2 parts together btw. sorry :/

NLSProductions - April 19, 2020, 8:13 pm

Well good luck in this. Usually most of these things are a load of rubbish so would be glad to know if they do work.

Personally the only thing that ever worked for me was a nand programmer but its alot more physical and can be damaging if you dont know what your doing x

Demize - April 19, 2020, 8:14 pm

i need a way to bypass an icloud lock on an apple watch, but i dont think theres a legitimate way

23Unlimited - April 19, 2020, 8:31 pm

(Apr 19, 2020 08:14 PM)Demize Wrote: [\[CITE\]](#) i need a way to bypass an icloud lock on an apple watch, but i dont think theres a legitimate way

That's literally why I made an account like 10 minutes ago. I ordered a perfect condition watch with the lock hoping there would be some workaround for it; when I get it I may try that icloudbypass vid I saw on youtube with the off chance that maybe it will unlock.

If you do take the time it would greatly be appreciated!

https://www.reddit.com/r/setupapp/comments/fjr740/windows_tethered_icloud_bypass_by_irogerosx/?utm_source=share&utm_medium=ios_app&utm_name=iossmf

^ Above is a link to some recent advancements by another creator to bypass the lock. It's not useful for me since I'm trying to remove it from the watch I purchased which is iCloud locked with a clean IMEI.

In addition, if anyone by chance has an apple watch 5 cellular/gps troubleshoot repair invoice (the kind of invoice a referenced in the linked post below)

----> (<https://hackforums.net/showthread.php?tid=5697448>)

I could really use one (in .cdr format preferably).
I would gladly pay for one. Thanks!

xAlimorAx - April 20, 2020, 4:10 am

Ok so everyone sit tight, tomorrow I will take the time to write up what I know... which not to toot my own horn but I know a bit. I have successfully bypassed iCloud on at least 3 phones the problem is

they lose the Sim capability and no longer can make calls. I have a method of my own I'm working on to fix this, it's a mix of a old method that I know about and a new method. The details are rough but basically a old bypass using Fiddler to trick iTunes into sending the activation packet to your phone would work but it was only temporary. Now the new method which uses Checkra1n to jailbreak the device, then you SSH into it and removed the files that cause the setup to trigger (which bypasses iCloud) but no sim capability. My hope is to use fiddler to fake the activation then remove the setup after.... I don't know if it will work and this is the first time I've voiced my plan so if someone else beats me to it y'all know where it came from :-)

Anyway I'll post the method and tools tomorrow and I'll post scan results and Host them on my own server with md5 hash so you can verify the files.

Anyone on any I device less than the XS which uses A13 chip should be ok (including Apple Watch but don't quote me on that yet) if your on the iPhone XS or equivalent then stay on IOS LESS THAN 13.3.1 13.3 is ok not 13.3.1

It will take me awhile to Put everything together tomorrow but I'll post a update when I get started.

Thanks for your interest!

xAlimorAx - April 21, 2020, 9:24 am

Sorry I had a bit of a delay yesterday but I'm working on putting it all together now.

23Unlimited - April 22, 2020, 2:04 am

No worries, take your time!

xAlimorAx - April 22, 2020, 7:19 pm

So if you have a iPhone 3-X on firmware 3-13.3 you can use Checkra1n to jailbreak then use SSH iCloud bypass to get into the device.

Here is a link to the actual process <https://myicloud.info/ssh-connection-to-localhost-with-checkra1n-read-write/>

This is the only legit process I know.

Sorry I've been sick so I have not been able to write the guide I planned on writing. But I will do my best to give my support and aid anyone in the process.

Another tool to look up especially if your a windows user is ra1nusb I'll get a link as soon as possible but this is a fully flash drive bootable version of the jailbreak.

Thanks I'll look into it as soon as I get home. Get well soon!

xAlimorAx - April 24, 2020, 6:55 pm

Ok, now i'm over being sick and back to my laptop!

Who needs to know what? I am gonna gather the links and post them on my server with MD5. I will be here at my computer for awhile because i have a new iPhone 6 to work on.
