Thread: [Hiding exe file In Jar file](#)

Zdziszke - April 19, 2020, 4:05 pm

Hi, I need to hide exe file in jar file, so when jar file is executed exe gets executed too. I know it can be done with binders but i dont know which should I use. Thanks for help !

You can include resource files in jar's, so this said you should be able to embed an executable file, remember jars are pretty much just a zip file. You can execute command line arguments using java :

<https://docs.oracle.com/javase/8/docs/technotes/guides/deploy/self-contained-packaging.html>

<https://stackoverflow.com/questions/8496494/running-command-line-in-java>

<https://stackoverflow.com/questions/20389255/reading-a-resource-file-from-within-jar>

I haven't tried it, been a while since I used a jar as a payload but it should work, perhaps someone with more experience can chime in.

Thanks, i will pm you If I will have more questions

So I can just put exe file in "jar zip" and then in java code run it by path ?
