Thread: [Nanocore - Not working](#)

Qshad - April 20, 2020, 11:22 am

Hey guys!

I'm sorry if this is the wrong thread for asking, I just signed up.

My parents bought 2 laptops for themselves and need some help whenever possible. Teamviewer or AnyDesk is not an option for me. So I downloaded Nanocore.

I compiled a .EXE with an NO-IP.net DNS, I created a port with ngrok because my ISP is not allowing Port Forwarding and fired it up on the laptop, I am not getting any connection on my main PC. When I open the Trojan on my main machine it works. But I think this is normal.

I am not using any Crypter or stuff, I enabled the port in the Firewall of my main PC, I disabled all Antivirus programs on the laptop... ...still not working. :(

I hope someone can help me!

BR,
Qshad!

VisualSoft - April 20, 2020, 11:24 am

why are you using that old rat, try out Quasar.
Its free and fast.

Qshad - April 20, 2020, 11:25 am

Not sure how to use it.

I compiled Quasar, and its not working, some bin file is missing (?)

VisualSoft - April 20, 2020, 11:31 am

Also you sure ngrok will open your port?

Qshad - April 20, 2020, 11:42 am

Yes, its getting requests but no connections.

I got to requests, for my icon and for something I cant see.

GET /favicon.ico

GET /

I wouldn't use you're main pc for experimenting.

If you want to test it on you're computer you'll have to put 127.0.0.1 as the ip address "only" if you're executing it on the same pc that nanocore is running on.
This is local host.

If you're using nanocore on one machine and executing the stub on another machine on you're network, you half to put you're local ip address or internal ip address.

subzerowins - April 20, 2020, 11:51 am

im sure that nanocore is not that bad. im using it almost 4 month and same connections / im not losing anyone.

VisualSoft - April 20, 2020, 10:08 pm

Can you see the port open on canyouseeme.org

noporkplz - April 20, 2020, 11:15 pm

use njrat, is better ten nanocroe .

Accord - April 21, 2020, 12:56 am

(Apr 20, 2020 11:15 PM)noporkplz Wrote: [\[CITE\]](#) use njrat, is better ten nanocroe . worst* its older than nano and you shouldnt use outdated rat. unless ur a fag

Try using your private IP on your computer as the connection if you don't know how to find your private IP you open command prompt on your computer and type "ipconfig" and look for "IPv4 Address" and use that as the primary connection. However if you do this the computer will only connect when on your network and i don't know if it will cause connection outside of your network. Hope this helps.
