Thread: [how can i reduce the detection of scan on virustotal](#)

notahackerman - April 22, 2020, 10:27 am

title, i no have junk codes, i think these are outdated..

any ideas, suggestions to reduce the detection of virustotal scanner?

what should i add more in my source?

i'm waiting your answers, thank you very much for your help till now ?

edit: also how can i crypt it? on ILspy i can see my whole source, ftp logins and others, thank you.

Why in the heck would you scan on VirusTotal if your attempting to keep things fud ??? Your creating yourself a headache cause they distribute samples to all av companies.

not without the scan results no one will be able to assist you, you can add random functions etc which don't do much and then icon and assembly info to help with detections.

updated: <http://prntscr.com/s47gkn>

it's from VT, it contains a lot of shits, it's a big project, anyway the name, assembly was fake, no icon when scanned...

at assembly i used random strings
icon = none
random fuctions = not yet added, i don't find a working junk generator

and i'm trying to crypt it with enigma but the results fail because it says "it's already compressed/cripted" but it isn't, wtf?
i used ILSpy and i can see my sauce with ftp login details, what could i do to reduce the detection and crypt?

i worked a lot on this project.. i really would like to launch it in few days

image is broken for me, however you can try like confuserEx should help you with the code being readable.

Some people are creating legit applications on here that they don't want picked up on VT.

So it is totally legitimate to scan on VT and try to reduce the detections there if you do not do anything malicious.

Also, uploading to VT doesn't automatically cause detections. You can upload steam to VT a thousand times and it still wont be detected.

i crypted it with confuserex, thank you very much, the source is not readable anymore at decompile and the ratio on scan was reduced high, kisses

i'm still looking for junk codes generator c# , u have any idea?

That doesn't look like a legit application then with so many detections.

(Apr 22, 2020 10:27 AM)notahackerman Wrote: [\[CITE\]](#) edit: also how can i crypt it? on ILspy i can see my whole source, ftp logins and others, thank you.

Using confuser or crypting your application isn't going to make your application secure, you will still be able to gather the FTP details via the decompiled binary.

Additionally, someone can just sniff the network requests to your FTP server and gather the credentials that way.

More experienced hackers are looking for people like you, they will download your malware and sniff your ftp credentials and clear out all your logs.

you have to use a server to do your logic on there.

You could create a PHP script that does what you need to do.

If you directly connect to your FTP script in your c# or vb.net application then your application is going to get hacked very quickly.

that application soonMy man, you just created malware. Are you saying it's not, or what are you implying?

That isn't just a single FP lol.

Sickness - April 23, 2020, 9:20 am

Are you that dumb to put all the eggs on one basket? Malware gathering logs and the keys on the same file? LOL make a php file or something on your server where you can send the files on. Don't be that dumb.
