Thread: [SOCKY || RESIDENTIAL PROXY / REVERSE SOCKS5 TOOL \[\\$29.99\]](#)

Charger - April 24, 2020, 7:45 am

This is no longer for sale.

[Lifetime Access Add-on License Reset License](#)

Ignore This [\(Click to View\)](#)

SOCKY is a tool to enable a SOCKS5 server on a computer without the need to portforward. With SOCKY, you can easily route traffic from anywhere in the world through a residential network making it look as if the connection came from your home network.

=====

Features

- [+] HTTP interface
- [+] Coded in C
- [+] No external dependencies
- [+] Encrypted strings
- [+] Unique builds
- [+] Simple builder
- [+] Legal tool
- [+] Works on Windows 7 and above
- [+] Small file size (~150KB)
- [+] Add to start up
- [+] Download and execute file

=====

=====

Pricing

[+]1 Panel - \$29.99 [Lifetime]
[+]Add License - \$19.99 [Addon]
[+]Change License - \$14.99 [Addon]

=====

Common Questions

What features does SOCKY have?

SOCKY has the ability to enable a SOCKS5 server without manually port forwarding. Additionally, SOCKY can download and execute files from remote sites. There are no plans to add additional remote administration features to SOCKY.

Will SOCKY work on every Windows computer?

SOCKY should work on any Windows computer running Windows 7 or newer. .

What is needed to run SOCKY?

You will need at least 1 Linux Server but it is recommended to have a separate web server for the panel.

Is SOCKY undetected by AV?

No. SOCKY is not undetected by all antiviruses. This is due to certain API calls that some anti-virus programs flag.

Is my data encrypted?

Data privacy is taken very seriously. Several measures are taken to keep your account and data safe. Your password is never stored as plain text. Additionally, your License information is not stored in plain text on our servers. It's encrypted with a key only you, the user, have. The only time your License data is sent to our server is when you build. That data is sent over SSL to the build servers and is not logged.

What is this pattern thing on the builder?

In order to maintain a high level of security and still have the data needed for the builder, you are required to draw a pattern to encrypt your data on SOCKY's servers. This protects you in the event something happens and data is compromised. Because of this, it is 100% impossible for SOCKY to reverse your pattern or reverse your encrypted panel urls. If you lose your pattern, you will have to pay to reset your License.

How much does SOCKY cost?

SOCKY is \$29.99. This includes 1 License. Each additional License is \$19.99. You can reset (new IP/URL) a License for \$14.99. Currently, Licenses do not expire. Anyone purchasing until (if ever) this is changed will be grandfathered in.

How many builds do I get?

Rebuilding your Client Computer file is free. There is a short time limit between builds.

How long are my files stored once built?

Built files are stored for a minimum of 3 days. It is highly recommended for you to download your files as soon as they are built. Do not rely on SOCKY to store them long term.

What is the panel?

The panel refers to your self-hosted website where your Linux Server Listener and Client Computer's will communicate. Your panel zip will automatically have your encryption key set.

What is the Linux Server Listener?

The Linux Server Listener is the file ran on your linux server. Traffic is enabled to your Client Computer's using this server.

What if an update is pushed to the panel?

If an update is available for panels, you will see it in your client panel. Never overwrite config.php.

Will I get banned if I use SOCKY without client permissions?

We will only revoke your License if you attempt to: disrupt the service, reverse the builder, client, or panel, or resell any builds or otherwise misuse SOCKY. Even if someone reports your file, we have no way to track it to your account.

How does the license work?

1 License will work for a single IP and HTTP Panel. Once the License is used for an IP and Panel URL it is locked to it. Neither your Server nor Client call back to any SOCKY servers. If you need to change the URL or IP or Port of your license, you'll have to purchase another License or purchase a License Reset..

Goodluck with this mate. I recall somewhere in a different thread you mentioned you were about to complete a project. Was it this? BTW, could you make the thread more pretty? You know, like text color pretty if not the layout design). Again GLWS.

Charger - April 24, 2020, 8:08 am

Yea, this is the project I have been working on since January 2020. The thread text is temporary. Going to have an actual design made shortly. The thread is automatically generated from various sections of the site lol.

nCuX0 - April 24, 2020, 8:13 am

Looks good, any dependencies on binary ? if you need review let me know, i can compare the speed with parasite proxy and backconnect socks(that one made in asm, not sure if you heard about it)

GLWS anyway

Charger - April 24, 2020, 8:14 am

GLWS anyway
Only dependency is Winsock. It's coded in C.

(May 14, 2020 02:05 AM)Jdutchman121 Wrote: [\[CITE\]](#) can linux server be set to a dynamic dns?
Not currently no

YounexCoder - May 16, 2020, 2:56 pm

Error Found: When i run the server on linux server

the port the server listen has a local address : 255.255.255.255 looks like a netmask address that is not found on any interface on 2 new linux servers that issue happens in 2 vps systems even i reinstalled the vps couple of times thinking there is an issue with my server
when i listen on port using netcat its listen and port open but with the socky server its the coonection get refused
Please correct the following errors before continuing:

Charger - May 22, 2020, 7:38 pm

Important update:

The major bug has been fixed.

Sorry for having to take SOCKY offline for about a week but I wanted to make sure I fixed it.

All good to go now. Thank you for the patience guys.

Charger - June 7, 2020, 4:14 pm

As many of you do not know, I have been working 15 hours a day for the last 10 consecutive days (on top of 12 hour days leading up to it). I apologize to my customers. I haven't had the time or focus to fully fix the bug that still exists. I am working on it. This is the first time I have had access to

a computer since well before June. I will have a fix pushed tonight or a full refund will be offered tomorrow.

I am sorry.

EDIT @ 19:53 (June 7th, 2020): Bug has been fixed. Go to the downloads section.

unusualdd - June 8, 2020, 1:43 am

How does this connect to home PCs with routers?

DodiePack - June 17, 2020, 11:47 am

Do i need this in order to run the proxies? im not sure what to do with api.. thanks

Charger - June 17, 2020, 1:25 pm

(Jun 17, 2020 11:47 AM)DodiePack Wrote: [\[CITE\]](#) Do i need this in order to run the proxies? im not sure what to do with api.. thanks

You need this to enable a socks5 connection from a windows computer.

Charger - July 7, 2020, 3:13 am

Might push a UI update today if I get time.

Charger - July 11, 2020, 5:44 pm

This is still up and running. Make sure to use a contract.

Ghidra - July 17, 2020, 7:12 am

been following this for a while and ready to make purchase soon.

Just curious, any way to run this on a rasperrypi unit?

or any ideas/suggestions where I can keep this program running (almost 24/7)

Charger - July 17, 2020, 7:13 am

(Jul 17, 2020 07:12 AM)zc6iicc Wrote: [\[CITE\]](#) been following this for a while and ready to make purchase soon.

Just curious, any way to run this on a rasperrypi unit?

or any ideas/suggestions where I can keep this program running (almost 24/7)

It can't be ran on non-windows.

Ghidra - July 21, 2020, 2:02 am

One more question:

So I can create a secure, authenticated SOCKS5 of , say, for example, my home IP.

Once authenticated and setup with the linux server

Will I be able to give out the socks:ports:user:authentication to multiple different other users to be able to utilize?

Charger - July 25, 2020, 12:54 pm

If anyone would like to join the affiliate program (make money referring) contact me.

wilsinn.anna.598 - August 16, 2020, 10:04 am

I am very interested in your product, but there are also many questions left. For \$ 30, I get a panel linked to your server? The software will completely depend on your desire to disable my subscription later or not? Or is it given to me forever and I can use it whenever I want without bindings and your control? What speed do these socks have in the end? Suppose I have a 1Gbps server, I install your program there. What will be the speed through a proxy, can you show it in practice? Ping and speed are important to me, and everything else above is also of interest. Where are your contacts? Telegram would be convenient for resolving issues, wouldn't it? It is not convenient to write here in the topic, but still everyone will see your answer. Thank.

I provide nothing but the files needed to host your own panel.

You host the panel and Linux listener.

You create the files on socky and use them.

Nothing communicates with Socky servers.

Your port speed will depend on the speed of the Linux server and of each remote computer you run socky on.

wilsinn.anna.598 - August 16, 2020, 10:19 am

(Aug 16, 2020 10:14 AM)Charger Wrote: [\[CITE\]](#) I provide nothing but the files needed to host your own panel.

So I read that a new IP address, host and new license are a waste of \$ 20 and \$ 15. It means that you somehow control this in yourself and in the event of the death of the software (and this is inevitable, sooner or later the support will end), I will not be able to do anything on my own. Can you give speed tests? I have a very old "backconnect socks bot" and it cuts the speed by itself, no matter which server is the start and end, the speed was cut to 1-2 Mbps and ping 300+.

If you change your URL or server IP you need a new license. You can either reset a license or add an additional license.

There is no speed limitation in socky.

wilsinn.anna.598 - August 16, 2020, 11:08 am

I repeat 3 times. Show by example what speed, what ping. Why should I spend money first and then check it myself? Present the product from all angles, show how it works. Me and others will no longer need to ask these questions if you show it clearly. It is clear, after you disappear the software turns into a pumpkin, think of something else then. So far it is very controversial and not clear. It seems to work, but it is not clear how the software has no future for the client.

The product works fine. I've sold socky to many many people and not a single one has complained about speed because there is nothing to limit the speed. Socky can go down and everything still works. For the second and last time, nothing communicates to socky servers ever. There are screenshots of the builder and panel. Those are the "angles". There is no ping to demonstrate. That's going to be solely dependent on YOUR SERVER, YOUR CLIENT PC, and WHERE YOU ACCESS THE SERVER FROM.

I'm not sure what your problem is but you need to check yourself, kiddo.

I'm fine, don't worry. A ton of shit is sold on this forum. If you do not look in both eyes, then it can be equated with pouring money down the toilet. On this topic it is not clear what a lot of people bought. Those who bought some problems and for some reason they write about it on the forum, and not to you in private messages. This is a bad call, so there is no support. You sell it for Bitcoin, so if the product is really shit, I can't get the money back. You could just paint everything fine, show how it works, show the APPROXIMATE speed, on good servers and sell calmly. If everything was fine with you, you would not hide anything. In principle, everything is clear with you. Good luck and progress in business .. I hope everything will be fine with you.

hustlehoff - August 21, 2020, 2:51 am

hello its exactly what i need ... is it cryptable so it can be runtime fud ?

other think is i cant setup panel and linux server any chance to get everything setup and running for a extra fee ? so i only need to spread .exe ?

Chill out. I'll check it when I get home. I've been working the last 3 days.

Reinstall the panel and make your file permissions 755

devappset - October 17, 2020, 2:10 am

Hello, Still I am having same issue - when I access http://IP/folder/login.php - it still takes me back to check_setup.php

please advice

Then you didn't set the file permissions to 755. If you open your config then it's probably not filled out because of the file permission.

Files set to 755, config.php still not imposed with details when hosted in linux server, then on windows server using XMAPP, upon panel build, it drops a test2.php file with the content of the panel - I rename test2.php to config.php and delete the other - web panel opens, but client cant connect - log says "Client connected but not found in database. if its ok - help me with setting this up, I have done and followed all requirements.

Yes, rename it to config.php.

That error is generated if there is latency between your linux server and your site where the panel is located.

Send me a PM instead of discussing further on the thread.

Reactivated this for today.

null_sa - December 1, 2020, 1:43 am

first of all , i think your product is have some bugs

1st, php panel :

A- check_setup.php do not change anything on config file

B- sql has 2 CURRENT_TIMESTAMP and that will show anerror when importing

2nd, linstor

A- Tested on 3 OS's and same error (<https://prnt.sc/vs4ibc>)

3rd exe file

A- cmd box showing when start then hide (<https://prnt.sc/vs7pps>)

B- ask for firewall to allow contact ! (<https://prnt.sc/vs7sd8>)

After all I tried to get support but it was wasting my time and I didn't get a real response from the seller

I have replied to all of your messages even though you send Bull shit "did t work"

I don't know how many times I have to tell you to CHANGE THE WEB FILE PERMISSIONS TO 755. A FILE CANT WRITE IF THE PERMISSIONS ARENT THERE. If you're too stupid to do that then so be it. That's why your SQL file won't update and subsequently your listener crashes. IF YOUR PANEL URL THROWS AN ERROR THEN IT CRASH THE LISTENER ON FIRST LOAD (initializing stuff).

The database saying duplicate table because you're trying to import on the database you've already imported on. I told you several times to DROP THE DATABASE.

I've been more than helpful trying to get you so do one simple task - CHANGE YOUR WEB FILE PERMISSIONS TO 755 yet you ignore it.

The firewall prompt is because SOCKY IS NOT MALWARE.

-5

You're an idiot.

In honor of this clown, \$10 off anyone who buys today and actually has a brain.

Lmao my mistake? Do you know how many people have bought socky and set it up fine?
Sucks to be you then. Everyone else got it set up just fine. You're just too stubborn to do what I'm telling you. Obviously you didn't change them.

The file CANT WRITE TO ITS SELF UNLESS IT HAS PERMISSION. Plain and simple. If you look at the config you'll see it didn't update because your permissions are probably 644.

Go ahead, try it. Run the set up and see if the file is updated at all. If you want proof it's the permissions, manually set your config information and then import the sql file to your database. You'll have to drop it (which you probably won't do and will get a duplicate table error).

<https://serverfault.com/questions/433265/how-do-i-change-the-nginx-user> or manually update the file or make the entire socky folder 777 since root owns your folder.
Still a permission issue.

Your MySQL version is way too old (nearly 8 years old). Upgrade to MySQL 5.7 minimum.

Tyler Durden. - December 5, 2020, 11:10 am

Hi,
I am very interested in your service / product!

However, for my purpose I can only use proxies in one country specifically.
Now I have looked here and on the website and I could not find my answer.

Do you have proxies for DK / Denmark ?

Thanks!

Charger - December 5, 2020, 11:11 am

BoysWhoCry - January 25, 2021, 2:10 pm

Here is my review....

TLDR: It's okay I guess for the price...

1. This is NOT a malware (even tho it has a download feature and a Melt/Hidden startup feature which is very malware like don't know why it would need either of the feature for legit usage) and will need user prompts clicked to work.

2. It uses a massive amount of resources for no reason. Used 25% of my cpu without even being connected to it. (Intel i5-8300 4 core)

3. It is complicated to setup and support is kind of trash (no offense). He will reply to you with unhelpful one liners. The guides on the website are bad and aren't very helpful. They will get you started but in no way take you from not working to working. If you want it to work for you, you will need to figure it out basically yourself.

4. Product seems to work? I couldn't get it working. I got it to connect to the linux server and everything but they don't show up in my panel.

EDIT: I could see how this could be useful for legit use, which I was wanting to use it for anyways. But it could for sure be better than it currently is.

Stanley - June 20, 2021, 6:30 pm

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
