Willing to pay and be explained the code for an undetected custom overwatch cheat. Payment by btc/paypal etc (I think btc is preferred so no scamming/charge backs.) Feel free to let me know if anyone can help. I know some C# C++ but suck at reverse engineering.,

You need up your price bro, overwatch cheats are \$300 + a month.

A private overwatch cheat? and you want the source? gl going under 5k-10k for that one.

If you're instead looking for something with your budget look at unleashed.

lawl you want a complete project source for overwatch cheat for p2c, for 250 bucks hahaha. Good luck.

Indeed not a very realistic price. Anyone that has written any cheat from scratch could easily make x 1000 off what you are bidding for it. I suggest you look for a cheat with fixed slots. But those are probably already more expensive than what you are offering.

I'm not looking for aimbot or anything like that, I don't need the source code. I just need to be able to modify memory addresses for colours and the HUD etc.
