Thread: [\[Startup Idea\] AI Bitcoin Software Company - \(Web/Software Developers\)](#)

RushEm - April 24, 2020, 5:27 pm

AI Meets Bitcoin

Contact Information

If you would like to contact me directly, you can through discord: Swifter#0830

Description And Goals

I am looking to put together a team of developers that are interested in a project that I have in mind. This particular project deals with bitcoin, escrows, AI interface, etc so if you're proficient in that sector when it comes to software developing then this would be perfect for you!

If you are familiar with developing with the software plaid, coinbase, this would be essential toward the business.

This will be a startup company that will grow with a great team! If you want to join me in this journey and discuss more contact me with a portfolio of your previous work.

All Are Welcome

If anyone else is interested in this project as well feel free to discuss your skill sets and what you would bring to day to day operations of the company.

How Will You Be Paid

Payments/Dividends will be discussed.

Information About Myself (My Skills Sets)

Spoiler [\(Click to View\)](#)

Here's a bit about myself:

Developed game/hack mods for certain video games and created a secured executable that inject code and headers into game header files to create an external virtual interface in game to manipulate game play.

Developed a Virtual Private Network software company that gives users privacy and security on the internet. Providing a secured web surfing opportunity to clients across the world. Managed multiple servers in multiple countries for users to connect to any part of the world and surf the web without having limits or restrictions.

Developed and managed a CDN network. Developed a system of any-cast technology to provide websites faster load times to potential clients no matter what part of the world they are at. With the main feature of an advanced DDOS mitigation system coded in python to provide Layer 4 & Layer 7 DDOS protection to websites to provide guaranteed uptime in any attack.

Learned programming and web development skills at a very young age of 10 years old. Self-taught and self-learned to achieve an understanding of advanced topics to develop software. With the acquired skills I created multiple businesses and business opportunities to capitalize on the skills learned.

After leaving the programming scheme I went on to learn business and marketing skill sets. Have developed great SEO knowledge and digital marketing knowledge over time and have managed to build up a network of connections to suppliers, client-tell, and businesses.

I can join you as a project manager if you want... cuz my software development side is not as experienced as I believe you require. Send me a message if that is a good enough fit (and a role you will require) and I will spill my work history for you ^_^

Ghost.13 - April 24, 2020, 6:09 pm

Hey mate, how you doin?

Software dev here for over 5 years on top of the NodeJS platform. Got experience developing business solutions through various web technologies, including but not limited to designing and integration of various web APIs, microservices, solution providers.

Send me a beep if you're interested.

Good luck on the venture mate.

vyactor - April 24, 2020, 6:11 pm

Let me know if you're ever willing to hire a frontend web developer or a UI/UX Designer.

RushEm - April 25, 2020, 12:48 pm

Thank you for your interests. We are still looking to add more team members.

IndeXer - April 25, 2020, 1:25 pm

I am good at customer service, if you need one then please let me know.

D3RP - July 16, 2022, 6:01 am

I'm a C/ C++ developer, interested in this project.
