Thread: [opening an empty form with sandbox](#)

notahackerman - April 27, 2020, 12:57 am

when i'm opening my malware with sandbox, will appear an empty form like this:

<http://prntscr.com/s6l4y9>

anyway the malware is running till i close the form, i wont that, it need to be silent without any form.. without sandbox, it's working silent.. any idea?

the malware is compiled by using code dom..

Redrum - April 27, 2020, 3:37 am

Try other methods of hiding and put it under " InitializeComponent();" like this OR check if opacity is not zero and is visible etc, if not call "Environment.Exit(0)" (Do the check on Form_Load() or Form_shown !)

```
Code public Main()
{
    InitializeComponent();
    this.Hide();
    this.Opacity = 0;
    this.Visible = false;
    this.ShowInTaskbar = false;

}
```

}
```

i don't find the solution, i'm using <https://github.com/NYAN-x-CAT/CodeDomExample> if you wanna take a look

the compiler/builder using code dom is working, no problem if it's opened with sandbox

but the Source.cs where is my malware, compiled still persists, this is the whole source, i just added my malware to Resources/Source.cs

what's wrong here?

Shadow_Cloud - April 27, 2020, 6:07 am

If you don't need anything from the user why is your project a windows forms project?

notahackerman - April 27, 2020, 7:34 am

i introduced that malwer in code dom compiler, that's why.. anyway it will be windows forms project

Shadow_Cloud - April 27, 2020, 7:35 am

So what in that requires windows forms?

notahackerman - April 27, 2020, 7:39 am

i think you don't understand..

i'm using <https://github.com/NYAN-x-CAT/CodeDomExample> , builder, to compile the source of <https://github.com/NYAN-x-CAT/Bitcoin-Grabber> which is located in Resources\Source.cs

the project require windows forms for compiler..

VisualSoft - April 27, 2020, 8:19 am

Looks like at the end you will get your program coded by all the users who post on your thread.

I understand. You don't.

None of that is true...

You don't need the project to be winForms for compilation. If that's why you have this problem, you really just don't understand how dependencies work.

```
Code public static class DynamicGenerator
{
    public static bool CompileCSharpCode(string sourceCode, string exeFile)
    {
        CSharpCodeProvider provider = new CSharpCodeProvider();

        CompilerParameters cp = new CompilerParameters
```

```

{
    GenerateExecutable = true, OutputAssembly = exeFile, GenerateInMemory = false
};
// Invoke compilation.
CompilerResults cr = provider.CompileAssemblyFromFile(cp, sourceCode);

if (cr.Errors.Count > 0)
{
    // Display compilation errors.
    Console.WriteLine("Errors building {0} into {1}", sourceCode, cr.PathToAssembly);
}
else
{
    Console.WriteLine("Source {0} built into {1} successfully.", sourceCode,
cr.PathToAssembly);
}

// Return the results of compilation.
if (cr.Errors.Count > 0)
{
    return false;
}
return true;
}
}

```

 ?????

I was waiting for someone to say it out loud.
 All the other threads he made... now this one... and above all he is stating on one of other threads he wants to sell "HIS" malware.

I'd really want to get infected by this if he gets it to run. I'm sure I'll be able to compromise everything he has here.

 at least he posted in the right section, maybe help him instead of digging in his profil and trolling ?

Spoiler ([Click to View](#))

So you want us to give u codes of:

c# builder and stub
hwid lock to sell
bypass WD AV
fud junk gen.
password stealer 2020
encryption algorithms
fud downloader
startup
..etc

So what's next? you also want us to help you become the next president? man..

How can u sell or use something without learning the basics? how could you improve\update your software? you will just hope to find 'everything' from GitHub and hf? this is unfair.

With all respect OP, try to learn the basics, try to create a calculator app or notepad app before jumping into malware stuff.

I really didn't want to post and nor being rude but man.. you just keep spamming in the C# section when you don't even know how to debug your own app.

However, GL OP.

Accord - April 27, 2020, 10:05 pm

[Redrum](#) already gave the answer yet op didnt know what to do with it, clearly op know nothing on what he is doing nor the language itself.

We help this guy on his previous thread, and then it keeps coming without his own code, he dont work on it, he dont know what c# is, he just keep on asking and asking, he even created another account just to ask another question which is against to hf rules..
