Thread: [What's up GPU rigs ?](#)

Honey Singh - April 27, 2020, 7:25 am

Hi,

It's not tough to guess when i say GPU rigs!

Well, Just wondering what exactly are you doing with your GPU based rigs ?

I have like 2-3 cards sitting with me rn,
Not sure what to do ?

what's your story guys ?

Edit - End game.

01001 - April 27, 2020, 7:37 am

I got a 1060 Ti, but that's for basic gaming or to run some software. Never thought of mining, and probably never will.

shreder - April 27, 2020, 7:49 am

ermm I sold my 1060/RX and other cards back in 2018 before RTX cards came.

Nice exit timing !

I'm still trying to figure it out what can be done :/

what is your price per hour for electricity

Mr Kewl - April 27, 2020, 3:46 pm

Bro, I'm sure there is a secondary market for these cards.

I forgot the name of the areas, I'll text you but a huge secondary sale market is there

It can be easily sold to people who are trying to get a cheap gaming pc

Ortek - April 27, 2020, 4:19 pm

Which cards do you have? I might be interested to buy a few if you're selling, say about 20-30 gpu's.
Depends on the price and the state they're in.

SaintJimmy - April 27, 2020, 8:11 pm

Does it have the facility of international shipping as well? If it does, please provide me a link as well.
I have been looking to get a newer gen i7 or a recently used i9 if possible.

(Apr 27, 2020 07:51 PM)Honey Singh Wrote: [\[CITE\]](#) Sure,
Condition is 100% working
Most of them are rarely used.

evga 1060 6 gb cards.
You should definitely start a thread. We'd love to see what you have on offer.

0xWar - April 27, 2020, 8:26 pm

Perhaps you should sell them at some eBay or something like that if you aren't planning on using them for anything else. They will only depreciate.

Mr Kewl - April 27, 2020, 10:49 pm

Hey Jimmy the issue is we get all the computer peripherals at 30-40% premium from compared to the USA market, so when I talk about this place it is still up at 20% premium.

What you can find in USA/ on sale is a great deal for us. So I'd recommend you just wait for a sale to happen and get a i9/i7.

HOMODIN - April 27, 2020, 11:39 pm

You don't mine with them anymore? -haven't checked if it's still worth it or not tbh.
When I was 'done' with the stuff that I had I returned the ones that were even slightly faulty, like for example most Strix GPU's since most of them had a bad batch of fans. They kept spinning out of their socket and just fall off after a few hours of running at full speeds, didn't affect cards that were laying on their backs tho. Then there was a few that I used for various gaming-ish rigs that I sold away for a low price or gave away to a few friends. I actually still have some spare parts like a few OP AF PSU's that are pretty much unused :D

Scam

Scam don't transact with him he is a big scam he will take your money and not deliver anything I just got scammed \$250 by this fugger! ? GOD PUNISH YOU.

This 0xwar is not trustworthy he will take your bitcoin and not deliver your job please be aware
Thanks for the caution ?

Money Man - April 28, 2020, 11:07 am

Lol I sold all my cards with shredders warning.

I thought HF had a mining section back in day but I may be tripping, remember a lot of heads. I eventually sold all my GPUs at bulk for cash. Electricity was more than what I was making with the rigs. I do remember the days of mining alt coins making 30\$+ per rig (6 1060 6gbs). I got good money back from the rams, PSUs and GPUS. Motherboards were a pain to get rid of, I still have a bunch of fkin PCI boards laying around in my basement

Well, Just wondering what exactly are you doing with your GPU based rigs ? Especially with 1060 & 1070 cards.

I have like 400+ cards sitting with me rn,
Not sure what to do ?

what's your story guys ?
Start selling them if you don't plan on using them. Usually this is what I did when I was mining back in the days. I had around 150 gpus, I was mining until I made tons of profit and then once I saw that the profit is going down and down on a daily basis, I got rid of the GPU's. And usually this is what most of the people are doing it. GPU's are hard to get to, especially in my country and prices are through the roof so still money can be made and the most people that buy these gpu's are gamers. The most important is not to mention that they have been used for mining, because as soon as you mention "mining" they'll just walk away.

I had around 20 1060's last month but I sold them like 2 weeks ago. I used to mine ETH.

Omniscient - April 28, 2020, 3:40 pm

I was just looking at GPU cards today.

What do you think of this?

https://www.amazon.com/gp/product/B06ZZ6FMF8/ref=ox_sc_act_title_4?smid=ATVPDKIKX0DER&psc=1

One issue is that my build now has crashed a few times and I can't be sure if it's from the CPU or GPU overheating. I checked my fans but I think I gotta check my GPU fan.

And for \$200 I'm wondering if I should just get a new system. Something like this:

https://www.amazon.com/gp/product/B07VGJDKZ4/ref=ox_sc_act_title_2?smid=ATVPDKIKX0DER&psc=1

Meh.

If you still have the FX series that entire build needs to be replaced.

<https://youtu.be/d9x0qLoALvE>

I don't think you're a hardcore gamer so even going SFF AMD APU is a great choice. This is a very niche build, so it's not the best performing thing but it's Ryzen the size of a shoe box with GT 1030 performance.

The only mod you have to do is shave off the AMD ring off the stock cooler otherwise I'd stay away from pre built.

Edit the RX series is so old I wouldn't buy the cards new, better to get them used at a lower price point. They're still great cards for a budget but it's better to buy them under \$120 than to pay above \$150 for a 4 year card.

This one is pretty much decent too when we compared with other cards in price.

Which GPU are you using currently boss?

If your system is getting crashed it's more likely because of GPU heating.

But I have good experience with EVGA they provide extended warranty too, so yea :)
