Thread: [Custom trading script - Profit update thread \[up 0.21953462 BTC or \\$2014\]](#)

Voxcon - April 28, 2020, 2:03 am

Hey guys,

i wasn't able to edit the thread title of my original thread (<https://hackforums.net/showthread.php?tid=6020393>) about my custom trading script anymore. Therefore i decided to create a new thread to keep you updated on the performance of my script and the profits it makes.

After the initial testing period i started the script with four instances running in parallel and trading with a total of 1 BTC on the 25th of march.

As of april 28th, three out of the four instances have been trading. They have performed 16 trades over the course of 33 days and generated a total profit of 0.07583751 BTC or \$583.32 (current exchange rate \$7,691.72).

Trades account 1:

Trades account 2:

Trades account 3:

Best regards and stay tuned for updates,
Vox

Lelouch Vi Britannia - April 28, 2020, 11:21 am

i wish i could check that out myself

Zee - April 28, 2020, 2:36 pm

Great project, I like the development aspect of it, however if you were to hold that same 1 BTC from March 25th till today, you would have approximately doubled your profits. Hopefully you are taking this into consideration when creating new trading strategies etc. However, the risk of taking a loss would probably be minimized by using the bot. Thank you for the updates, I enjoy following this project.

Yin Yang - April 28, 2020, 2:37 pm

Have you considered trading other than DOGE?

omy11 - April 29, 2020, 7:41 am

Will you be updating on this thread or a new one?

Asking so i can follow it.

Voxcon - April 30, 2020, 2:27 pm

Hey guys,

lately i have been getting messages claiming that my trading script an myself are full of shit and that i'm going full skript kiddie by abusing the inspect element feature of my browser and photoshop (creative insult, i respect that). Therefore i decided to record a little video for them as well as for Lelouch Vi Britannia.

(Apr 28, 2020 11:21 AM)Lelouch Vi Britannia Wrote: [\[CITE\]](#) i wish i could check that out myself

Thanks for the feedback Zepro. Lukily because i did trade on the DOGE/BTC market i haven't missed out on the btc profits over the last couple of days. And by trading i increased my amount of BTC. So in the end i did better than just sitting on my btc and waiting for it to rise ;)

(Apr 28, 2020 02:37 PM)Yin Yang Wrote: [\[CITE\]](#) Have you considered trading other than DOGE? Yes i have considered trading on other markets as well. I might give it a shot in the near future (I'll be testing with a really small amount in the beginning though).

(Apr 29, 2020 07:41 AM)omy11 Wrote: [\[CITE\]](#) Will you be updating on this thread or a new one? I will be updating this thread with the current performance of my trading script as long as i can edit the main thread title. Afterwards I'll probably create a new thread.

Small update for now: I didn't expect doge to "skyrocket" to the 31 / 32 sat trading range for the last couple of days (no trading instance was set up for that range), therefore the script didn't do much. It completed a few buy orders and is waiting for corresponding sell orders to get filled (i only count profits after my sell orders have been successfully filled).

Filled buy:

Another filled buy:

Best regards,
Vox

Algo-rhythm - May 1, 2020, 2:08 am

As usual, I'm a big fan of your work.

Thanks for updating.

Voxcon - May 10, 2020, 1:26 am

Hey folks,

just a small update. After almost 2 weeks the script finally performed another sell order. Total profit is now up to: 0.08557995 BTC or \$759 (current trading rate 8,875.43).

Furthermore i have been working on improving the script. It will most likely be publicly available within the next few days / weeks.

Best regards,
Vox

Luca - May 10, 2020, 1:31 am

Are you planning on sellin/giving out this script any time soon? I'd probably be first in line to cop it.

Voxcon - May 15, 2020, 8:06 am

Small development update,

this time my post is not about trading porfits (since my last post, the script performed a few buy-orders but sell orders haven't filled yet).

During the last few days i have been working on upgrading the practicability, usability and looks of the script:

Changes that i've made:

- I've added a login system to the script
- The script now supports ALL binance markets, EXCEPT future markets!
- I have implemented a function that checks whether or not you have any active orders for the selected market before the script tries to place it's initial order.
- Furthermore i have updated the overall information you get about your active / newly placed / or filled orders.

Here are two screenshots:

Screenshot 1 - Initial starting message, login system, check whether you want to cangle the active open order or not:

Spoiler ([Click to View](#))

Screenshot 2 - Order canceled information, initial action information (in this example an buy order) and action check message:

Spoiler ([Click to View](#))

Development wise i think that i'm at a stage where i can make this available for you guys now. But before i do so i would like a few of you to test it and give me honest feedback. If you are interested in testing, drop me PM.

Best regards,
Vox

Voxcon - May 22, 2020, 1:10 am

Hey folks,

just a small update. Even though the volume of the DOGE / BTC market hasn't been very good during this whole bitcoin halvening thing, my script still managed to perform a few profitable trades. The total profit is now up to 0.11539091 BTC or \$1048.85 if calculated with the current trading rate of \$9089.58 per btc.

So after almost two month we have finally surpassed the 0.1 BTC and 1k profit barriers, which i'm quite happy about.

Here is a little recap of the accounts which completed profitable trades during the last few weeks.

Account 1 - 0.01029872 BTC profit since april 26th:

Account 2 - 0.01008280 BTC profit since may 10th:

Account 4 - 0.00942944 BTC profit, this was the first trading cycle the script completed since march 25th on this account:

Even though the script didn't manage to complete as many trades during may as it was during april, i'm still quite happy with the outcome so far.

I've also been working on further improving the script, so that i can make it available for you in the near future. I still need a few people for final beta testing, so if you are interested let me know.

Best regards,
Vox

Flash ? - May 22, 2020, 1:24 am

Thats damn amazing bro. you looking at any other coins like this?

Voxcon - May 22, 2020, 1:39 am

(May 22, 2020 01:24 AM)Flash ? Wrote: [\[CITE\]](#) Thats damn amazing bro. you looking at any other coins like this?

I have done a few small testing sessions for other markets like DOGE / USDT and BTC / USDT, but the purpose of those was mainly to see if trading on other markets besides DOGE / BTC works.

Here is a small example of initial DOGE / USDT testing.

Best regards,
Vox

krisj - May 22, 2020, 2:17 am

This seems pretty great, nice returns in a short time for a trading script! Looking forward to your sharing ;)

Would be happy to test out other markets :)

gurvir124 - May 23, 2020, 10:53 am

hey!
good work on the bot
keep it up
stay motivated :)

SIM-3867235 - May 24, 2020, 1:29 pm

Interested in this, let me know if I can try it.

Voxcon - May 26, 2020, 2:50 am

(May 24, 2020 01:29 PM)waytoosplashy Wrote: [\[CITE\]](#) Interested in this, let me know if I can try it. PM sent.

Also, here is another quick profit update. Ths script completed another trading cycle on the 28/29

sat trading pair. Therefore the total profit went up by another 0.01070730 BTC and is now at 0.12609821 BTC or \$1121 (calculated with a rate of \$8893.96 / BTC).

Furthermore the script is now available at @ <https://hackforums.net/showthread.php?tid=6080665>

The price for the subscription is negotiable, so if you are interested. PM me.

Best regards,
Vox

shreder - May 26, 2020, 8:14 am

Have you gotten any loss? I mean of course you'll only post winnings.

Wildchild00 - May 26, 2020, 9:18 am

Kindly post your losses too bro, in forex, you win some and lose some...

Voxcon - May 26, 2020, 10:14 am

Hi,
thanks for the questions guys.

The script is designed in a way to only perform profitable trades.

Within the configuration file you set your entry point (the price you want to buy at) and your exit point (the price where you want to sell). Afterwards the script automatically places alternating orders once a certain order is filled. E.g. when a buy order gets filled it will automatically post a higher sell order and if the sell order gets filled, it will automatically post a lower buy order.

Therefore the script will never perform an unluccrative trade, but if the market moves into a drieriction which you did not expect (this means which you haven't defined within the setting or your overall setup), the script will not perform any further actions until the defined buy / sell criteria are filled.

This means, even though the script does not perform unluccrative trades, you can still end up holding bags if the market did move into a direction you did not expect!

But to keep it short. No i haven't gotten any losses as of now.

Best regards,
Vox

Yes, I'm saying that i have never had an unlucrative trade while using the script.

Check out the video from my second post within this thread. You can see me loggin into four of my accounts there and you will see that i have not had a single negative in the trading history of either of the accounts.

I have no idea what MYFXbook is.

Best regards,
Vox

Well if you say so, only time would tell.....

Wishing you all the Best in your new method!

abushobak - May 26, 2020, 1:21 pm

OK, never thought there is such a thing. So basically u run the script and it does the trades automatically based on the settings u provided?

If so, thats sick. Keep up the great work mate.

Voxcon - May 26, 2020, 11:28 pm

Yep, that's pretty much it.

Best regards,
Vox

Voxcon - June 5, 2020, 8:57 am

Hey guys,

I have another quick profit update for you.

Since my last post the script instances 2 and 4 have performed profitable trades. Therefore the overall profit increased to 0.14630625? BTC or \$1,417 (calculated with a current exchange rate of \$9,686 per BTC).

Account 2 - profit 0.0104357?0 BTC:

Account 4 - profit 0.00977234 BTC:

If you are interested in the script feel free to have a look at the thread where i'm offering subscriptions to it: <https://hackforums.net/showthread.php?tid=6080665>

Best regards,
Vox

Unconfirmed - June 6, 2020, 10:48 am

Looks like a great project, it seems like it's written in python.

Have you thought of assembling a team and adding in other cryptocurrencies, and then offering a subscription-based service to use the bot?

Voxcon - June 7, 2020, 4:01 am

(Jun 6, 2020 10:48 AM)Unconfirmed Wrote: [\[CITE\]](#) Looks like a great project, it seems like it's written in python.

Hey Unconfirmed,

yes the script is written in python and it supports trading multiple cryptocurrencies already. In fact it can trade on any market on the binance exchange except the futures markets. And the script is already available for a small subscription fee. So if you are interested in it or want to try it, let me know.

Also for a bit more detail about the script have a look at my initial thread:

<https://hackforums.net/showthread.php?tid=6020393>

and my newer thread here: <https://hackforums.net/showthread.php?tid=6080665>

Best regards,
Vox

Voxcon - June 16, 2020, 1:12 am

Hey guys,

just wanted to update you on the recent profits. Unfortunately the DOGE / BTC market was even less volatile and even lower volume than in the first few month of the year. Therefore the script was once again not able to perform many trades within the last week and a half, but it nevertheless managed to complete a trade cycle.

It bought 1.04m DOGE for 26 sats each on the 4th of june and flipped them for 27 sats on june 11th. The profit of the trade equals to 0.01012804? BTC or in usd to \$96,25 when calculated with the current price of \$9,503.76 per BTC.

Therefore the total profit since march 25th increased to: 0.15643429? BTC or \$1,486.

Account 2:

If you are interested in the script feel free to drop me a PM or have a look at my other threads about the script.

E.g. here: <https://hackforums.net/showthread.php?tid=6080665>

Best regards,
Vox

Voxcon - June 20, 2020, 6:07 am

Another quick profit update.

This was a good week. The script was able to complete another trading cycle on the 26 / 27 sat price point resulting in a profit of 0.01049682? BTC or \$97 (calculated with a current btc price of \$9,310.25). This brings the total profit up to 0.16693111 BTC or \$1554.17 since march 25th, which means that we have finally surpassed the \$1.5k profit mark. And it didn't even take us three month :)

Account 2:

If you are interested in the script feel free to drop me a PM or have a look at my other threads about the script.

E.g. here: <https://hackforums.net/showthread.php?tid=6080665>

Best regards,
Vox

prebs14 - June 20, 2020, 11:54 am

good work ;)

Are you planning on selling this script ?

Voxcon - July 10, 2020, 1:44 am

Hey guys,

sorry for not updating you in a while, but i was and i will be quite busy untill the end of september. Nevertheless i wanted to give you a small profit update which was boosted a bit by the most recent doge shills on tik tok.

Since my latest update the four instances of my script which i'm running in parallel managed to complete a total of 5 profitable trading cycles. They averaged a profit of 0.013150878 BTC per trading cycle. Which resulted in an additional profit of 0.05260351 BTC or \$482 when calculated with the current trading price of \$9,177.56 per BTC.

Therefore the most recent trades boosted the total profit since march 25th up to 0.21953462 BTC or \$2014! Yeey finally above 2k profits in total :D

Trades on account 1 - profit = 0.01106754 BTC:

Trades on account 2 - profit = 0.01080043 BTC:

Trades on account 3 - profit = 0.01985698 BTC:

Trades on account 4 - profit = 0.01087856 BTC:

If you are interested in the script feel free to drop me a PM or have a look at my other threads about the script.

E.g. here: [Custom trading Script - Dogeflipper](#)

Best regards,
Vox

kinnu543 - July 10, 2020, 10:43 am

good keep update this thread, you are making consistent profits that is very nice.
