Upon registration you get \$25 worth of credits.

You can create your own linux server after registration (trial account):

CPU 1core

MEMORY 1GB

STORAGE 10GB

I didnt try but there is option to create windows server with similar specifications in trial mode.

Also, you can add \$10 more and get out of "trial mode" on account and buy some VPS cheaper than you would buy it somewhere else.

You can earn bonus credits to your UpCloud account by sharing your unique referral link or code with your friends. For every new user who signs up using your referral code and makes at least the minimum one time payment, you will receive \$50 worth of free credits. Every new user also receives a bonus worth of \$25 credits when signing up through the referral program.

Another site:

If you want you can get free vps 4 GB ram, 3 cores with payment of \$0.01 for 7 days.

You can earn credits by referring new customers to VPSServer.com. You will earn 500 credits (\$25.00) for every referred customer. You can do this by sharing your referral link or inviting your contacts by email.
