Yes they are, without a doubt.

I bought the 9.99 plan, had to wait a bit longer but he delivered one with 16cores and 16gb ram for the same price. Speedtest was insanely good, and 4ms ping.

Highly recommended. What a machine, very impressive. Solid and stable.

Not being able to renew may be a downside but it's not a problem for me... I like it as you get a new ip and rdp every month.

Think positive.

Bought the VPS #2 Package. I bought directly from his website. Process was pretty simple and fluent. Setup was superfast after payment completion.

VPS is superfast. getting around 500-600Mbps down & 800 Up. Could be better here I guess but still sufficiently fast.

So far so good.

Edit:

RDP stopped working in maybe a week or so. He replaced with another in 2 days. When I asked whether it might happen again or not? He said it might & it is part of their TOS mentioned on their website. That kind of defeats purpose of buying RDP for my use as I needed a continuous working reliable server which I can count on without checking it every other day. But if you can work with that, then it is a good VPS.
