Thread: [How to hack an apache webserver?](#)

Viktori - April 30, 2020, 5:03 pm

I am new in the "Hacker" scene an i just wanted to know how to hack an apache webserver so that can download images

satpam - May 4, 2020, 3:07 pm

Hello friend,

Apache can running on Windows or Linux Server,
You can hack the Apache if u got the vulnerability

Ampere - May 10, 2020, 5:33 am

Check the version of Apache and then check if there is a corresponding exploit for that.

pizza500 - May 11, 2020, 4:40 am

you can download images from a server, if public, without to hack it

SIM-4686477 - May 11, 2020, 9:54 am

Scan vuln port and inject it with shell backdoor.

In hacking first step is Information Gathering. gather all information about apache such as version, which port is running, and on which OS etc,

Hope you know how to find those using a single tool called NMAP. ?

Hi Viktori, Welcome to HF. I wish you have a great life ahead.

ormerishere - May 12, 2020, 5:12 am

Using MetaSploit can help you with running the relevant exploit.

Only good - not evil!
