Thread: [gps hacking](#)

kyr70 - May 2, 2020, 3:23 am

Hello

I have a car which has a gsm based gps from the company I work, I need a little help I have found a device that hack the gsm and send the coordinates I wanted to the website application of the company and looked like I was moving but I was someware stopped, I cannot find the link now, any information or link will be helpfull.

TY

Be careful as this would need I mock location enabled so youre company could find out, only alternative is using a jammer if you think they would notice

Jamming GSM is illegal and can get you in real trouble. I would just not do that.

Try to search for another point of entry, like the application or how the gsm gps module works. Perhaps you can replicate the data that is sent, somewhat like a man in the middle.

Tampering with software/hardware that you dont own is illegal too... no you cant do that as as i said no matter what would enable mock location and most monitoring programs note this

Yeah what dumb ass would want to jam gsm signals anyway.

"Counter UAV Inbound" ~ ?
