Thread: [Best File Extension to Use for Archived/Zipped Payload to Bypass Chrome Detection](#)

SIM-4509092 - May 3, 2020, 12:57 am

Google chrome detects payload as risky file in zip, winrar, img. I'll like to know the best extension to use for either the payload or in zip that's effective to bypass Google Chrome detection after file is downloaded without setting a password for archived file. Most suitable for email spreading.

Your replies and suggestions would be greatly appreciated.

Gracias!

try to use your own VPS as hosting in place of free hosting.

You can try using word/excel exploit. This way you would be able to spread thru mail.
