Thread: [RAT only working on my own PC \(nanocore\)](#)

AshBait - May 3, 2020, 4:33 am

Hi,

I recently got Nanocore to start scambaiting, when i run the file on my own pc it work fine and it shows up on the client section in nanocore. However, when I run the file on my Virtual Machine or a different laptop, after opening the file, clicking yes and all, the VM or laptop doesnt show up on the client page?

Can anyone help?

Thanks,
Ash

Try to see if your firewall is blocking your ports. Also are your ports open in the first place? Most of the time when I see this issue, it's usually because of ports, firewall or DNS.

If the issue was the server, it wouldn't have ran on your own machine.

VisualSoft - May 3, 2020, 6:12 am

I Agree with shitmaster, check out your port first.

SIM-888979 - May 3, 2020, 6:17 am

Most likely you're not portforwarded. Also, I remember if you're testing on the same network, there might be some issue.

Accord - May 3, 2020, 6:23 am

What is your configuration?? maybe you setup it for local use only?

VisualSoft - May 3, 2020, 6:26 am

Naaa, Same network does not make any difference.

You can test open ports on your Client here:<https://www.canyouseeme.org/>

Fire_Star - May 4, 2020, 3:49 am

I think i soled your Problem OP.

QRCode - May 4, 2020, 12:31 pm

How you solved it?

Have the same problem when testing on myself that work but not on my VM.

Quasar work, but not Async

PS: Port OPEN (UDP / TCP) / TESTING WITH DNS & WITHOUT DNS

Quasar work fine but the password recovery is shit..

if anyone else needs any help just send me a message :)

amyweiser - May 4, 2020, 11:06 pm

Lol nanocore is dead and doesn't work anymore. Only those with the original cracked version can use it. I advice you to check for another RAT.

Hello,

This can happen for 2 reasons:

-Antivirus detect and delete your malware

-You don't open correctly your port

Use a no-log VPN (or build yourself), use a VPS if you can, and please remember to open your port and to use your ext. ip!
