ip sign ups to what site. Ofc automation and proxies but to what company

find someone with a huge botnet. Program a script run a hRDP connection, run the hidden registration script and boom. as many registrations worldwide as you want.

What you think recon we could make that happen?

But I can script it in python, wait and switch IP's through proxies and leave running using people names from databases fore registration.

How much is it worth... Message me a price
